Invesco India Equity Savings Fund

(An open ended scheme investing in equity, arbitrage and debt)

Investment Objective

To generate capital appreciation and income by investing in equity and equity related instruments, arbitrage opportunities and fixed income instruments (including debt, government securities and money market instruments).

However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

Asset Allocation Pattern of the Scheme

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Type of Instruments	Normal Allocation (% of Net Assets)	
	Minimum	Maximum
1. Equity & Equity Related Instruments	65	90
1.1 of which derivatives including index futures, stock futures, index options & stock options etc (only arbitrage opportunities) ^	25	75
1.2 of which unhedged equity portion^^	15	40
Debt* & Money Market Instruments	10	35

*Debt includes Government Securities. Debt instruments may include securitized debt (including pass through certificates (PTC)) upto 35% of the net assets of the Scheme.

Under defensive circumstances, the asset allocation of the Scheme would be as follows:

Type of Instruments	Normal Allocation (% of Net Assets)	
	Minimum	Maximum
1. Equity & Equity Related Instruments	15	65
1.1 of which derivatives including index futures, stock futures, index options & stock options etc (only arbitrage opportunities) ^	0	50
1.2 of which unhedged equity portion^^	15	40
Debt* & Money Market Instruments	35	85

* Debt includes Government Securities. Debt instruments may include securitized debt (including pass through certificates (PTC)) upto 50% of the net assets of the Scheme.

The Scheme will not invest in foreign securitized debt.

^The exposure to derivatives would be taken against the underlying equity exposure and denotes hedged equity positions.

^^Pure equity exposure which will not be hedged and is aimed to gain from potential capital appreciation.

The margin money deployed on these positions (both equity and/or debt derivatives) would be included in Money Market category.

The Scheme may use derivatives for purposes as may be permitted from time to time. The cumulative gross exposure through equity, debt and derivative positions shall not exceed 100% of the net assets of the Scheme, subject to provisions of SEBI circular dated August 18, 2010 w.r.t. investment in derivatives.

The Scheme may seek investment opportunity in foreign securities in accordance with the guidelines stipulated by SEBI and RBI from time to time. The exposure to foreign securities (including mutual fund and other approved securities) shall not exceed 50% of the net assets of the Scheme.

The Scheme may enter into repos /reverse repos as may be permitted by RBI. From time to time, the Scheme may hold cash. A part of the net assets may be invested in the Collateralised Borrowing & Lending Obligations (CBLO) or repo or in an alternative investment as may be provided by RBI to meet the liquidity requirements. In terms of the Repurchase Transactions (Repo) (Reserve Bank) Directions, 2018 issued by the Reserve Bank of India (RBI), the Clearing Corporation of India Limited (CCIL) has discontinued the segment for Collateralized Borrowing and Lending Obligations (CBLO) and has introduced Tri-party Repo.

The Scheme may engage in short selling of securities in accordance with the framework relating to short selling and securities lending and borrowing specified by SEBI from time to time.

The Scheme shall not deploy more than 20% of its net assets in securities lending. In addition to above limit, in case of debt instruments, the Scheme shall not deploy more than 5% of the net assets in securities lending to any single counter party.

Pending deployment of the funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of the Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as may be amended from time to time.

Subject to the Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the Fund Manager, the intention being always to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and defensive considerations. The Fund Manager will restore asset allocation in line with the asset allocation pattern within 30 days.

In case the portfolio is not re-balanced within 30 days, justification for the same shall be recorded in writing and will be placed before the investment committee. The investment committee will then decide on further course of action.

Investment Strategy of the Scheme

The Scheme will invest in both equity and debt securities, employing a unique combination of three investment strategies- pure equity (net long equity), arbitrage and debt. The net long equity exposure is aimed to generate capital appreciation, while arbitrage opportunities and allocation to debt securities will be directed towards providing income and generate stable returns.

The Scheme will take advantage of arbitrage opportunities by exploiting the price differential between cash and derivatives markets. To select stocks, the Scheme will adopt a combination of bottom-up and top-down approach. In addition, the fund manager may also utilize the internal model for deciding equity allocation. The fixed income securities selection will be based on top-down approach, interest rates view and yield curve movements. The Scheme will actively use arbitrage opportunities to hedge the portfolio and generate low volatility returns.

Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

- **Risk associated with Equity and Equity Related Instruments**

- Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and

volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, general decline in the Indian markets, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAVs of the Units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities, including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

Further, the volatility of medium / small - capitalization stocks may be higher in comparison to liquid large capitalisation stocks.

The Scheme may invest in securities which are not listed on the stock exchanges. These securities may be illiquid in nature and carry a higher amount of liquidity risk, in comparison to securities that are listed on the stock exchanges or offer other exit options to the investor. The liquidity and valuation of the Scheme's investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

- Risks associated with investing in fixed income and money market instruments involve interest - rate risk, credit risk, liquidity or marketability risk, re-investment risk, volatility risk etc.
- Risks associated with investing in ADR/GDR and foreign securities involve fluctuation in foreign exchange rates, restriction on repatriation of capital and earnings under the exchange control regulations and transaction procedure in overseas market. The exchange risk associated with a foreign denominated instrument is a key element in foreign investment.
- Risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

• **Risks associated with Securitised Debt**

Risk associated with investing in securitised debt involve interest rate risk, prepayment risk, credit or default risks. Further, Asset Backed Security has structure risk due to a unique characteristic known as early amortization or early payout risk.

• **Risks associated with Securities Lending**

For Equity Instruments: As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However, this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/ issuer.

For Debt Instruments: As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

• **Risks associated with Short Selling**

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

• **Risks related to arbitrage strategy**

The Scheme seeks to exploit price discrepancies in various markets. Identification and exploitation of the strategies to be pursued by the Fund Manager involve uncertainty. No assurance can be given that Fund Manager will be able to locate investment opportunities or to correctly exploit price discrepancies in the capital markets. Reduction in differential pricing opportunities between the cash market and future and options market may lead to lower level of activity affecting the returns. As the Scheme proposes to allocate a part of its assets to execute arbitrage transactions in various markets simultaneously, this may result in high portfolio turnover and consequently high transaction cost.

Further, in case of a large redemption, the Scheme may need to reverse the spot-futures transaction before the date of futures' settlement. While reversing the spot-futures transaction on the Futures & Options settlement day on the Exchange, there could be a risk of volume-weighted-average-price of the market being different from the price at which the actual reversal is processed. This may result in basis risk. On the date of expiry, when the arbitrage is to be unwound, it is not necessary for the stock price and its future contract to coincide. There could be a discrepancy in their prices and there is a possibility that the arbitrage strategy gets unwound at different prices.

• **Risk Mitigation Strategies:**

For Equity and Equity Related Instruments:

Type of Risk	Measures to mitigate risk
Volatility Risk	By monitoring sector / company exposure at portfolio level.
Liquidity Risk	The Fund Manager will control the liquidity at portfolio construction level.
Concentration Risk	By diversifying across stocks / sectors, concentration risk can be reduced. The Fund Manager will endeavor to build well diversified portfolios within the overall fund specific investment strategy, which will help in controlling concentration risk.

For Fixed Income and Money Market Instruments:

Type of Risk	Measures to mitigate risk
Volatility Risk	The Scheme would look to actively monitor all existing investments based on the interest rate movements and changes in the credit spreads over sovereign yields. Hence, over a short term period of time the volatility could be in line or higher compared to the market yield movements. However, over a period of time we intend to neutralize the volatility by reducing the portfolio turnover. The Scheme would generally try and avoid any trade unless there is any view on credit spreads or on interest rates and reduce volatility.
Liquidity Risk	The Scheme will try and track the inherent liquidity of the assets in the portfolio and reduce exposures in those assets which have lower liquidity in the secondary market compared to the others. However, the Scheme will have a bias of higher yields over liquidity since its targeted at investors with a reasonable long period of investment horizon.
Credit Risk	The internal credit scoring model to identify appropriate credits will be predominantly used by the Scheme for identifying the securities. Moreover, the external credit ratings of all the assets will be of investment grade or better. The internal credit assessment team will actively monitor the changing credit profile of all invested credits.
Concentration Risk	By investing in debt securities across sectors, concentration risk can be reduced. The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy, which will help in controlling concentration risk.

The additional expenses charged in case of inflows from such cities will be utilized for distribution expenses incurred for bringing inflows from such cities.

Till the time the term 'retail investor' is defined, as an interim measure, the additional TER of 30 basis points shall be based on inflows from individual investors from B 30 cities. Thus, inflows from corporates and institutions from B 30 cities will not be considered for computing the inflows from B 30 cities for the purpose of additional TER of 30 basis points. Top 30 cities shall mean top 30 cities based on Association of Mutual Funds in India (AMFI) data on 'AUM by Geography - Consolidated Data for Mutual Fund Industry' as at the end of the previous financial year.
