I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets.
- Past performance of the Sponsor /AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1,50,000/- (Rupees One Lakh Fifty Thousand Only) made by it towards setting up the Mutual Fund.
- The present Scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors / Risk Mitigation Measures:

➤ Risks associated with ESG theme

Investing in a thematic fund is based on the premise that the Scheme will seek to invest in companies belonging to only specific theme. The Scheme being theme specific will be affected by the risks associated with companies based on environment friendly, socially responsible and sound corporate governance practices and hence concentration risk is expected to be high. Stocks of companies which are filtered on the basis of ESG parameters may shift into and out of favor with stock market investors depending on market and economic conditions and the Scheme's performance may at times be better or worse than the performance of schemes that do not follow ESG theme.

➤ Risk associated with Equity and Equity Related Instruments

Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, general decline in the Indian markets, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAVs of the Units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

Further, the volatility of medium / small - capitalization stocks may be higher in comparison to liquid large capitalisation stocks.

Risk Mitigation Measures

Type of Risk	Risk Mitigation Measures
Volatility	By monitoring sector / company exposure at portfolio level.
Concentration	By diversifying across stocks / sectors, concentration risk can be reduced. The fund manager will endeavor to build well diversified portfolio within the overall fund specific investment strategy which will help in controlling concentration risk.
Liquidity	The fund manager will control the liquidity at portfolio construction level.

➤ Risk associated with Fixed Income and Money Market Instruments:

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. In case of floating rate instruments, an additional risk could arise because of changes in spreads of floating rate instruments. With increase in spread of floating rate instruments, the price can fall and with decrease in spread of floating rate instruments, the prices can rise.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. In case of Government Securities, there is minimal credit risk to that extent.

Lower rated or unrated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

The ability of the Scheme to execute sale/purchase order is dependent on the liquidity or marketability. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

➤ Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement

Clearing Corporation of India Ltd. ('CCIL') is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from

time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations.

The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSDL account of the Member with RBI.

Invesco Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments.

To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses arising out of any default by its members from outright and repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades.

In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss.

The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

➤ **Risks associated with investing in ADR/GDR and Foreign Securities**

Subject to necessary approvals, the Scheme may also invest in ADRs/ GDRs/ overseas financial assets as permitted under the applicable regulations. The value of an investment in foreign securities may depend on general global economic factors or specific economic and political factors relating to the country or countries in which the foreign issuer operates. To the extent the assets of the Scheme are invested in overseas financial asset, there may be risk associated with fluctuation in foreign exchange rates, restriction on repatriation of capital and earnings under the exchange control regulations and transaction procedure in overseas market. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls, political circumstances, bi-lateral conflicts or prevalent tax laws.

Investment in foreign securities carries currency risk. Currency risk is a form of risk that arises from the change in price of one currency against other. The exchange risk associated with a foreign denominated instrument is a key element in foreign investment. This risk flows from differential monetary policy and growth in real productivity, which results in differential inflation rates. The risk arises because currencies may move in relation to each other.

➤ **Risk Factors Associated with repo transaction in Corporate Debt Securities:**

Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. Fund Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis and / or with entities regulated by SEBI/RBI/IRDA. In the event of default by the repo counterparty, the Scheme will have recourse to the corporate debt securities given as collateral to recover the investment by selling the collateral in the market. However, selling of collateral will also be subject to liquidity risk in the market and the Scheme may incur impact cost at the time of selling the collateral.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations or there is downward migration in rating of collateral. Further if the rating of collateral goes below the minimum required rating during the term of repo or collateral becomes ineligible for any reason, counterparty will be expected to substitute the collateral. In case of failure to do so, IAMI / Schemes of the Fund will explore the option for early termination of the trade.

➤ **Risks associated with investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

➤ **Risks associated with Securities Lending**

For Equity Instruments:

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/issuer.

For Debt Instruments:

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral

put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

➤ **Risks associated with Short Selling**

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

➤ **Risk Factors associated with investments in REITs and InvITs**

- **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend payouts, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

➤ **Risks associated with segregated portfolio**

- a) Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- b) Security(ies) held in segregated portfolio may not realize any value.
- c) Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his

exposure over 25% limit. Failure on the part of the said investor to redeem his exposure over 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

- As the liquidity of the Scheme's investments may sometimes be restricted by trading volumes and settlement periods, the time taken by the Fund for Redemption of Units may be significant in the event of an inordinately large number of Redemption requests. The Trustee has the right to limit redemptions under certain circumstances. Please refer to the section **"Restriction on Redemption / Switch-out of Units"**.
- Pursuant to the provisions of Prevention of Money Laundering Act, 2002, if after due diligence, the AMC believes that any transaction is suspicious in nature as regards money laundering, failure to provide required documentation, information, etc. the AMC shall have absolute discretion to report such suspicious transactions to FIU-IND and / or to freeze the folios of the investor(s), reject any application(s) / allotment of units and effect mandatory redemption of unit holdings of the investor(s) at the applicable NAV subject to payment of exit load, if any.

- **Equity and Equity Related Instruments:**

1. Equity share is a security that represents ownership interest in a company. It is issued to those who have contributed capital in setting up an enterprise.
2. Equity Related Instruments are securities which give the holder of the security right to receive equity shares on pre agreed terms. It includes convertible debentures, convertible preference shares, warrants carrying the right to obtain equity shares, equity derivatives and such other instrument as may be specified by SEBI from time to time.
3. Equity Derivatives are financial instrument, generally traded on an exchange, the price of which is directly dependent upon (i.e. "derived from") the value of equity shares or equity indices. Derivatives involve the trading of rights or obligations based on the underlying, but do not directly transfer property.
4. Derivatives:
Futures are exchange-traded contracts to sell or buy financial instruments for future delivery at an agreed price. There is an agreement to buy or sell a specified quantity of financial instrument on a designated future date at a price agreed upon by the buyer and seller at the time of entering into a contract. To make trading possible, the exchange specifies certain standardized features of the contract. A futures contract involves an obligation on both the parties to fulfill the terms of the contract.

SEBI has permitted futures contracts on indices and individual stocks with maturity of 1 month, 2 months and 3 months on a rolling basis. The futures contracts are settled on last Thursday (or immediately preceding trading day if Thursday is a trading holiday) of each month. As per SEBI Circular No. SEBI/HO/MRD/DOPI/CIR/P/2018/161 dated December 31, 2018, stock derivatives are physically settled.

Option is a contract which provides the buyer of the option (also called holder) the right, without the obligation, to buy or sell a specified asset at the agreed price on or upto a particular date. For acquiring this privilege, the buyer pays premium (fee) to the seller. The seller on the other hand has the obligation to buy or sell specified asset at the agreed price and for this obligation he receives premium. The premium is determined considering number of factors such as the market price of the underlying asset/security, number of days to expiry, risk free rate of return, strike price of the option and the volatility of the underlying asset. Option contracts are of two types viz:

Call Option - The option that gives the buyer the right to buy specified quantity of the underlying asset at the strike price is a call option. The buyer of the call option (known as the holder of call option) can call upon the seller of the option (writer of the option) and buy from him the underlying asset at the agreed price at any time on or before the expiry of the option.

The seller (writer of the option) on the other hand has the obligation to sell the underlying asset if the buyer of the call option decides to exercise his option to buy.

Put Option - The right to sell is called put option. A Put option gives the holder (buyer) the right to sell specified quantity of the underlying asset at the strike price. The seller of the put option (one who is short Put) however, has the obligation to buy the underlying asset at the strike price if the buyer decides to exercise his option to sell.

There are two kind of options based on the date of exercise of right. The first is the European Option which can be exercised only on the maturity date. The second is the American Option which can be exercised on or before the maturity date.

W.e.f. December 31, 2010, all the options contracts in F&O Segment will have European Option only.

In addition to above, the scrip that fulfills the following criteria shall be considered eligible for SLB:

3. In case unable to receive shares in auction, there will be financial close-out.

Investment Process:

The Scheme will primarily invest in equity securities of companies which are selected based on Environmental, Social and Governance (ESG) criteria as defined by our proprietary investment framework.

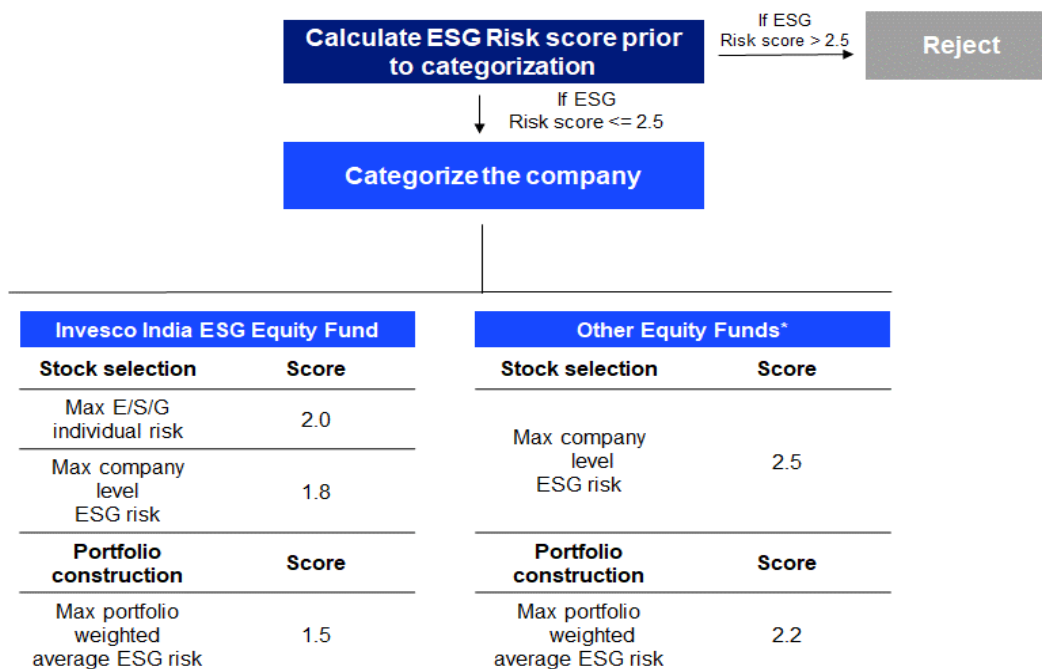

Our ESG philosophy is integrated with our equity investment philosophy and provides an additional framework of risk analysis. Evaluation of ESG factors is an important input to our investment process integrated with our core inputs on financial research – both primary and secondary.

We measure the ESG risk for the companies on a scale of 1-3, whereby 3 denotes High Risk or Negative, 2 denotes Moderate Risk or Neutral and 1 denotes Low Risk or Positive. This is thus a reverse scaling system. We have assigned a higher and at par weightage of 40% to Governance aspect for all companies/ industries. The balance 60% is distributed between Environmental and Social aspect based on the relative influence of these aspects on the industry in which the company operates.

At a stock screening level, while categorizing any new company as per IAMI's existing proprietary stock categorization framework, our analyst evaluates the ESG risk score of the company being considered for categorization. Companies above a defined threshold ESG risk score of 2.5 would not be considered for categorization thereby making ESG integral to the investment process.

After detailed screening and qualifying on our ESG framework, at a portfolio construct level, we will include only those companies in the portfolio which will meet our defined thresholds individually. For instance, the maximum ESG risk score on any of these three parameters individually, should not exceed 2.0 while maximum permissible company level ESG risk score should be 1.8. Thus, being an ESG centric fund, at an aggregate level, we intend to have the maximum permissible portfolio weighted average ESG risk score of less than or equal to 1.50.

The various filtration criteria for stock selection are depicted through a flow diagram given below-

*Excluding passive and arbitrage strategies.

The above mentioned ESG score is subject to change based on the changes within the overall ESG framework.

STOCK SELECTION PROCESS

Based on the Scheme's objective, we start filtering down the possible investment universe to more attractive opportunities. The process involves company, industry, economic and technical analysis in alignment with the investment objective of the underlying fund. The Scheme's investment objective has implications for definition of the universe, company selection, industry and asset allocation.

Matrix Analysis

As part of the Matrix approach we analyze, bottom up, the fundamentals of the companies that are part of the universe. We use external research and find it useful as a source of information and financial models. However, we believe our direct and in-depth interaction with a company and its competitors, suppliers and buyers-wherever feasible and possible, helps us arrive at our own unique insight into the company. The maximum inefficiency in the markets is at the company level and an in-depth research effort can generate a knowledge advantage and superior performance.

To this, we add our top down economic views and industry views - leading to industry and asset allocation decisions. The economic and industry analysis also has its implications on company selection. Technical analysis is another input for asset allocation decisions. All of this is in keeping with the investment objective of the specific scheme.

Security Selection

To help select stocks for the portfolio, we use a proprietary stock categorization system. The objective of our stock categorization system is to enable us to identify stocks that are likely to be the best investments from within our universe. Each category of stock has a description of fundamental attributes that we expect the company to possess. The categorizations are as follows:

Stock Category	Descriptions (eg.)	Growth Prospects (eg.)	Company Attribute (eg.)	Financial Parameter (eg.)
Star	Young companies	High growth	Entrepreneur vision,	Operating

			scalability	Leverage
Leader	Established companies	In line or better than industry	Track record of leadership, globally competitive	Industry leading margin / ROE
Warrior	Young / established companies	Better than industry	Unique proposition and / or right place, right time	Margin & ROE expansion
Diamond	Company with valuable assets	Low growth	Management intent to unlock value	Value of asset / business
Frog Prince	Company in a turnaround situation	Back to growth	Intrinsic strengths in core business	P2P, ROE expansion*
Shotgun	Opportunistic investment	Positive surprise	Corporate event, restructuring, earnings news	Event visibility
Commodities	Call on the cycle is paramount	Positive	Integration, cost efficiency, globally competitive	Profit leverage

* P2P – Path to Profit, ROE – Return on Equity

Stocks that fit into one of these categories typically display superior return profiles, but more importantly this enables fund managers to focus on the attributes that drive stock price performance and keep a watch for red flags.

The financial parameters under stock selection process are explained as follows:

- Margin - EBITDA margin or PAT Margin
 - ✓ EBITDA - Earnings before interest, taxes, depreciation and amortization.
 - ✓ EBITDA Margin - Earning before interest, taxes, depreciation and amortization / Revenues
 - ✓ PAT- Profit after Tax
 - ✓ PAT margin- Profit after Tax / Revenues
- Return on Equity (ROE) - Profit after Tax / Net Worth.
- Net worth - Equity share capital + Reserves.
- ROE Expansion - increasing trend in ROE over time.
- Value of Asset or business - Market or replacement value of the assets after accounting for liabilities.
- Operating Leverage - Sensitivity of margins to increase in revenues.
- Profit Leverage - Sensitivity of Profits (EBITDA or PAT) to changes in unit price or total revenues.
- Path 2 Profit - refers to the various levers such as, but not limited to, cost reduction, revenue growth, revenue mix, discontinuing of a product/business, asset sales, change in capital structure that a company might adopt to improve profitability / reduce losses.

▪ **Portfolio Construction**

The fund manager has the primary responsibility for portfolio construction based on the investment objective of the Scheme. Portfolio construction guidelines are laid down for each fund and reviewed on a need basis and otherwise regularly on a quarterly basis. Every investment decision we make is by keeping in mind the investment objective of the Scheme and how the security will affect the overall portfolio. In addition, we also look into the current economic / industry views that impact industry and asset allocation decisions for the fund. Technical views which are relevant to asset allocation, if applicable are also taken into consideration. Our preference is for companies with the characteristics as defined in our stock categorization framework.

▪ **Sell Discipline**

We may sell a stock because the fundamentals of a company, industry or economy have changed or a company's competitive advantage appears to have deteriorated. It could also be a function of alternative opportunities being available at a more attractive valuation or an inability to justify prevailing valuations.

▪ **Oversight**

The role of monitoring and reviewing is undertaken by the investment committee consisting of Chief Executive Officer, Head - Equity Funds, Head - Fixed Income, Chief Financial Officer & Chief Operating Officer and Head - Compliance & Risk and by any additional member who may be included/nominated to the committee which meets on a periodic basis. The committee is empowered to establish internal norms such as industry allocation, asset allocation etc. for each fund and to monitor and review this on an ongoing basis.

E. INVESTMENT STRATEGY

The Scheme will primarily invest in equity securities of companies which are selected based on Environmental, Social and Governance (ESG) criteria as defined by our proprietary investment framework. The stock selection will be guided by our ESG framework as defined under the heading 'Investment Process'. At all times, on an aggregate basis, the Scheme intends to have the maximum permissible portfolio weighted average ESG risk score of less than or equal to 1.50. The Scheme will primarily invest in largecap stocks and will limit exposure to midcap & smallcap stocks upto 35% allocation of overall portfolio. The Scheme will follow blend of growth and value style and will have approximately 30 - 40 holdings.

RISK CONTROL

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to VAR, tracking error etc. Further AMC has implemented Bloomberg Asset and Investment Management System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager calculate various risk ratios, average duration and analyze the same.

INVESTMENT IN DERIVATIVES

The Scheme may invest in various derivative instruments which are permissible under the applicable Regulations and shall also be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index).

Derivatives are financial contracts of pre-determined fixed duration, like stock futures/options and index futures and options, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities, and equities.

Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on stock exchanges whereas OTC derivative transactions are generally structured between two counterparties.

The risks associated with derivatives are similar to those associated with equity investments. The additional risks could be on account of

- Illiquidity;
- Potential mispricing of the Futures/Options;
- Inability of derivatives to correlate perfectly with the underlying (Indices, Assets, Exchange Rates);
- Cost of hedge can be higher than adverse impact of market movements;
- An exposure to derivatives in excess of the hedging requirements can lead to losses;
- An exposure to derivatives can also limit the profits from a genuine investment transaction.

Exchange traded derivative contracts in stocks are physically settled and indices in India are currently cash settled at the time of maturity.

The Scheme will comply with all the applicable circulars issued by SEBI as regard to derivatives viz. SEBI Circular no. SEBI/MFD/CIR No. 03/ 158 /03 dated June 10, 2003, no. DNPd/Cir-29/2005 dated September 14, 2005, no. SEBI/IMD/CIR No. 9/108562/07 dated November 16, 2007, no. Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010.

These futures expire on the last working Thursday of the respective months.

Illustration with Index Futures

In case the Nifty near month future contract is trading at say, Rs. 9,600, and the fund manager has a view that it will depreciate going forward; the Scheme can initiate a sell transaction of Nifty futures at Rs. 9,620 without holding a portfolio of equity stocks or any other underlying long equity position. Once the price falls to Rs. 9,500 after say, 20 days, the Scheme can initiate a square-up transaction by buying the said futures and book a profit of Rs. 120.

Correspondingly, if the fund manager has a positive view he can initiate a long position in the index / stock futures without an underlying cash/ cash equivalent subject to the extant regulations.

There are futures based on stock indices as mentioned above as also futures based on individual stocks. The profitability of index /stock future as compared to an individual security will inter-alia depend upon:

- The carrying cost,
- The interest available on surplus funds, and
- The transaction cost.

Example of a typical future trade and the associated costs:

Particulars	Index Future	Actual Purchase of Stocks
Index at the beginning of the month	9,600	9,600
Price of 1 Month Future	9,620	
A. Execution Cost: Carry and other index future costs	20	
B. Brokerage Costs:	4.81	11.52
(0.05% of Index Future and 0.12% for spot stocks)		
C. Gains on Surplus Funds:	40.325	0
(Assumed 6.00% p.a. return on 85% of the money left after paying 15% margin)		
(6.00%*9600*85%*30days/365)		
Total Cost (A+B-C)	-15.51	11.52

Few strategies that employ stock /index futures and their objectives:

(a) Arbitrage

(1) Buying spot and selling future: Where the stock of a company “A” is trading in the spot market at Rs. 100 while it trades at Rs. 102 in the futures market, then the Scheme may buy the stock at spot and sell in the futures market thereby earning Rs. 2.

Buying the stock in cash market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts when there is a convergence between the cash market and the futures market. This convergence enables the Scheme to generate the arbitrage return locked in earlier.

(2) Selling spot and buying future: In case the Scheme holds the stock of a company “A” at say Rs. 100 while in the futures market it trades at a discount to the spot price say at Rs. 98, then the Scheme may sell the stock and buy the futures.

On the date of expiry of the stock future, the Scheme may reverse the transactions (i.e. buying at spot & selling futures) and earn a risk-free Rs. 2 (2% absolute) on its holdings without any dilution of the view of the fund manager on the underlying stock.

Further, the Scheme can still benefit from any movement of the price in the upward direction, i.e. if on the date of expiry of the futures, the stock trades at Rs. 110 which would be the price of the futures too, the Scheme will have a benefit of Rs. 10 whereby the Scheme gets the 10% upside movement together with the 2% benefit on the arbitrage and thus getting a total return of 12%. The corresponding return in case of holding the stock would have been 10%.

Note: The same strategy can be replicated with a basket of Nifty-50 stocks (Synthetic NIFTY) and the Nifty future index.

(b) Buying/ Selling Stock future:

When the Scheme wants to initiate a long position in a stock whose spot price is at say, Rs.100 and futures is at 98, then the Scheme may just buy the futures contract instead of the spot thereby benefiting from a lower cost.

In case the Scheme has a bearish view on a stock which is trading in the spot market at Rs.98 and the futures market at say Rs. 100, the Scheme may subject to regulations, initiate a short position in the futures contract. In case the prices align with the view and the price depreciates to say Rs. 90, the Scheme can square up the short position thereby earning a profit of Rs.10 vis-a- vis a fall in stock price of Rs. 8.

(c) Hedging:

The Scheme may use exchange-traded derivatives to hedge the equity portfolio. Both index and stock futures and options may be used to hedge the stocks in the portfolio.

(d) Alpha Strategy:

The Scheme will seek to generate alpha by superior stock selection and removing market risks by selling appropriate index. For example, one can seek to generate positive alpha by buying a bank stock and selling Bank Nifty future.

Risk associated with these strategies:

- Lack of opportunities;
- Inability of derivatives to correlate perfectly with the underlying security; and
- Execution risk, whereby ultimate execution takes place at a different rates than those devised by the strategy.

Execution of these strategies depends upon the ability of the fund manager to identify and execute based on such opportunities. These involve significant uncertainties and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Option Contracts (Stock and Index)

An Option gives the buyer the right, but not the obligation, to buy (call) or sell (put) a stock at an agreed-upon price during a certain period of time or on a specific date.

Options are used to manage risk or as an investment to generate income. The price at which underlying security is contracted to be purchased or sold is called the Strike Price.

Options that can be exercised on or before the expiration date are called American Options while, Options that can be exercised only on the expiration date are called European Options

Options Risk / Return Pay-off Table

Stock/ Index Options		Buy Call	Sell Call	Buy Put	Sell Put
1	View on Underlying	Positive	Negative	Negative	Positive
2	Premium	Pay	Receive	Pay	Receive
3	Risk Potential	Limited to premium paid	Unlimited	Limited to premium paid	Unlimited
4	Return Potential	Unlimited	Premium Received	Unlimited	Premium Received

Note: The above table is for the purpose of explaining concept of options contract. As per the current Regulations, the Scheme(s) cannot write option or purchase instrument with embedded write option.

Option contracts are of two types - Call and Put

Call Option: A call option gives the buyer, the right to buy specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of call option however, has the obligation to sell the underlying asset if the buyer of the call option decides to exercise the option to buy.

Put Option: A put option gives the buyer the right to sell specified quantity of the underlying asset at the set strike price on or before expiration date and the seller (writer) of put option however, has the obligation to buy the underlying asset if the buyer of the put option decides to exercise his option to sell.

Index Options / Stock Options

Index options / Stock options are termed to be an efficient way of buying / selling an index/stock compared to buying / selling a portfolio of physical shares representing an index for ease of execution and settlement. The participation can be done by buying / selling either Index futures or by buying a call/put option.

The risk are also different when index /stock futures are bought/sold vis-a-vis index/ stocks options as in case of an index future there is a mark to market variation and the risk is much higher as compared to buying an option, where the risk is limited to the extent of premium paid.

In terms of provision of SEBI circular dated August 18, 2010, the Scheme shall not write options or purchase instruments with embedded written options.

The illustration below explains how one can gain using Index call / put option. These same principals of profit / loss in an Index option apply in Toto to that for a stock option.

Call Option

Suppose an investor buys a Call option on 1 lot of Nifty 50 (Lot Size: 75 units)

- Nifty index (European option).
- Nifty 1 Lot Size: 75 units
- Spot Price (S): 9600
- Strike Price (x): 9700 (Out-of-Money Call Option)
- Premium: 37

Total Amount paid by the investor as premium $[75 \times 37] = 2775$

There are two possibilities i.e. either the index moves up over the strike price or remains below the strike price.

Case 1- The index goes up

• An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves up to 9900 in the spot market and the premium has moved to Rs 250 and there are **15 days more left for the expiry**. The investor decides to reverse his position in the market by **selling** his 1 Nifty call option as the option now is **In the Money**.

His gains are as follows:

- Nifty Spot: 9600
- Current Premium: Rs.250

- Premium paid: Rs.37
- Net Gain: Rs.250- Rs.37 = Rs.213 per unit
- Total gain on 1 lot of Nifty (75 units) = Rs.15,975 (75*213)

In this case the premium of Rs.250 has an intrinsic value of Rs. 200 per unit and the remaining Rs. 50 is the time value of the option.

• **An investor exercises the Nifty Option at expiry**

Suppose the Nifty index moves up to 9800 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty call option as the option now is in the money. His gains are as follows:

- Nifty Spot: 9800
- Premium paid: Rs.37
- Exercise Price: 9700
- Receivable on exercise: $9800 - 9700 = 100$
- Total Gain: Rs. 4725 $\{(100 - 37) * 75\}$

In this case the realised gain is only the intrinsic value, which is Rs.100, and there is no time value.

Case 2 - The Nifty index moves to any level below 9700

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.2775 (Loss is capped to the extent of Premium Paid) (Rs 37 Premium paid*Lot Size: 75 units).

Put Option

Suppose an investor buys a Put option on 1 lot of Nifty 50.

- Nifty 1 Lot Size: 75 units
- Spot Price (S): 9600
- Strike Price (x): 9500 (Out-of-Money Put Option)
- Premium: 40
- Total Amount paid by the investor as premium $[75 * 40] = 3000$

There are two possibilities i.e. either the index moves over the strike price or moves below the strike price.

Let us analyze these scenarios.

Case 1 - The index goes down

• **An investor sells the Nifty Option before expiry:**

Suppose the Nifty index moves down to 9400 in the spot market and the premium has moved to Rs. 140 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty Put Option as the option now is in the money. His gains are as follows:

- Nifty Spot: 9400
- Premium paid: Rs.40
- Net Gain: Rs.140 - Rs.40 = Rs.100 per unit
- Total gain on 1 lot of Nifty (75 units) = Rs.7500 $(100 * 75)$

In this case the premium of Rs.140 has an intrinsic value of Rs. 100 per unit and the remaining Rs.40 is the time value of the option.

An investor exercises the Nifty Option at expiry (It is an European Option)

Suppose the Nifty index moves down to 9400 in the spot market on the expiry day and the investor decides to reverse his position in the market by exercising the Nifty Put Option as the option now is in the money.

His gains are as follows:

- Nifty Spot: 9400
- Premium paid: Rs.40
- Exercise Price: 9500

- Gain on exercise: $9500 - 9400 = 100$
- Total Gain: Rs.4500 $\{(100 - 40) * 75\}$

In this case the realised amount is only the intrinsic value, which is Rs.100, and there is no time value in this case.

Case 2 - If the Nifty index stays over the strike price which is 9500, in the spot market then the investor does not gain anything but on the other hand his loss is limited to the premium paid.

- Nifty Spot: >9600
- Net Loss Rs.3000 (Loss is capped to the extent of Premium Paid) (Rs. 40 Premium paid*Lot Size: 75 units).

Risk Associated with these Strategies

- The risk of mis-pricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.

PORTFOLIO TURNOVER

The Scheme being open ended Scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. The fund management team depending on its view and subject to there being an opportunity, may trade in securities, which will result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable measure of accuracy, the likely turnover in the portfolio of the Scheme.

INVESTMENT BY THE AMC IN THE SCHEME

Under Regulation 28(4) of the SEBI (MF) Regulations, the AMC will invest not less than one percent (1%) of the amount raised in New Fund Offer of the Scheme or Rs. 50 lacs, whichever is less, in the growth option of the Scheme and such investment will not be redeemed unless the Scheme is wound up.

In addition to investments as mandated under Regulation 28(4) of the Regulations as mentioned above, the AMC may invest in the Scheme in the New Fund Offer Period or on an ongoing basis subject to the SEBI (MF) Regulations.

As per the existing SEBI (MF) Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

An Illustration: Flex STP will work as follows:

Installment amount to be transferred	Rs. 3,000/-
No. of Installments	12
STP period	September 2020 - August 2021
STP Start Date	3 rd of the month

Calculation of Flex STP installment amount on the date of the fifth installment i.e. January 3, 2021.

- i) Total units allotted up to the date of last (fourth) installment i.e. December 3, 2019 is assumed as 823;
- ii) NAV as on January 3, 2021 of Growth option of Transferee Scheme is assumed as Rs. 12/- per unit;
- iii) Hence the market value of investment in the Transferee Scheme on the date of transfer of fifth installment i.e. January 3, 2021 will be Rs 9,876/- i.e. (823*12).

The installment amount for fifth installment will be calculated as follows:

(a) Fixed amount to be transferred per installment: Rs. 3,000/-.

Or

a. As determined by the formula: $(3,000 \times 5) - 9,876 = \text{Rs. } 5,124/-$.

(a) Or (b) whichever is higher:

Hence, the installment amount to be transferred in the Transferee Scheme on January 3, 2021 will be Rs. 5,124/-

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the Principle of fair valuation as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of Units under the Scheme shall be calculated by either of the following methods shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or fair value of the Scheme's investments} + \text{Current Assets including Accrued Income - Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

Or

$$\text{NAV (Rs.)} = \frac{\text{Unit Capital + Reserves and Surplus}}{\text{No. of Units outstanding under the Scheme on the Valuation Day}}$$

The NAV shall be calculated up to two decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Direct Plan under the Scheme will have separate NAV. Separate NAV will be calculated and disclosed for each option. The NAVs of the growth option and the dividend option will be different after the declaration of the first dividend.

The AMC will calculate the NAVs of the Scheme on daily basis. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

There are no specific SEBI guidelines on valuation of foreign securities at present. In the absence of any guidelines, the following policy will be followed:

In case of investment in foreign securities, on the Valuation Day, the securities shall be valued in line with the valuation norms specified by SEBI for Indian equity/ debt securities. However, in case valuation for a specific equity/ debt security is not covered by SEBI (MF) Regulations, then the security will be valued on fair value basis.

Due to difference in time zones of different markets, in case the closing prices of securities are not available within a given time frame to enable the AMC to upload the NAVs for a Valuation Day, the AMC may use the last available traded price for the purpose of valuation. The use of the closing price / last available traded price for the purpose of valuation will also be based on the practice followed in a particular market. In case any particular security is not traded on the Valuation Day, the same shall be valued on a fair value basis by the Valuation Committee of the AMC.

On the Valuation Day, all assets and liabilities denominated in foreign currency will be valued in Indian Rupees at the Bid Rate of foreign currency INR exchange rate available on Reuters at 5.00 p.m.

In case, the Reuters exchange rate is not available, then the following sources will be used for exchange rate in the order of priority:

- Exchange rate (Bid Rate) available on Bloomberg at 5.00 p.m. IST;
- Reference rate issued by Financial Benchmarks India Ltd. (FBIL)
- Any other publicly available source.

The Trustees reserve the right to change the source for determining the exchange rate.

The exchange gain / loss resulting from the aforesaid conversion shall be recognized as unrealized exchange gain / loss in the books of the Scheme on the day of valuation. Further, the exchange gain / loss

D. WAIVER OF LOAD FOR DIRECT APPLICATIONS

Not Applicable

E. TRANSACTION CHARGES

In terms of SEBI circular no. IMD/ DF/ 13/ 2011 dated August 22, 2011, a transaction charge, as follows, is payable to distributors who have opted to receive transaction charge*:

- i. For existing investor in a Mutual Fund: Rs. 100/- per subscription of Rs. 10,000/- and above;
- ii. For first time investor in Mutual Funds: Rs. 150/- per subscription of Rs. 10,000/- and above.

*Distributors shall also have the option to either opt in or opt out of levying transaction charge based on type of the product.

In case of investment through systematic investment plan (SIPs), the transaction charge shall be applicable only if the total commitment through SIP (i.e. amount of each SIP installment X total number of SIP installments) amounts to Rs. 10,000/- and above. In such cases, the transaction charge shall be recovered in 3-4 installments, as may be decided by the AMC

However, there will be no transaction charge on:

- i. Subscription of less than Rs. 10,000/-; or
- ii. Transactions other than purchases / subscriptions relating to new inflows; or
- iii. Direct subscription (subscription not routed through distributor); or
- iv. Subscription routed through distributor who has chosen to 'Opt-out' of charging of transaction charge; or
- v. Transaction routed through Stock Exchange(s).

The transaction charge, if any, will be deducted by AMC from subscription amount and shall be paid to distributor. The balance subscription amount, after deducting applicable transaction charges, will be invested.

It is clarified that upfront commission to distributor will continue to be paid by the investor directly to distributor by a separate cheque.

Calculation of transaction charge and balance subscription amount in case of subscription routed through distributor is explained as follows:

(In INR)

Subscription Amount (A)	For existing investors in a Mutual Fund		For first time investor in Mutual Funds	
	Transaction charge (B)	Balance Subscription Amount (A-B)	Transaction charge (C)	Balance Subscription Amount (A-C)
10,000	100	9,900	150	9,850
9,999	Nil	9,999	Nil	9,999
10,00,000	100	9,99,900	150	9,99,850

Note: Balance subscription amount will be invested and Units will be allotted at applicable NAV per unit for the balance subscription amount on an on-going basis.

F. STAMP DUTY

Pursuant to Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019 read with subsequent Notification No. S.O. 1226 (E) and G.S.R. 226(E) dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, a stamp duty @ 0.005% of the Transaction Value will be levied on applicable mutual fund transactions i.e. purchases (including switch-in, dividend reinvestment etc.). Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchase, switch-in, installment of Systematic Investment Plan, Systematic Transfer Plan and reinvestment of dividend to the unitholders will be lower to that extent. The stamp duty will be arrived at using inclusive method of calculation. For applying stamp duty, Transaction Value will be calculated after deducting transaction charges and such other charges as may be applicable from time to time. The calculation of stamp duty is explained as follows:

If an investor subscribes units for Rs.1,00,000/- through a distributor and transaction charges payable to distributor are Rs.100/-, then stamp duty will be calculated as follows:

Transaction Value = Subscription Amount - Transaction Charges (i.e. 1,00,000-100) = 99,900/-

Stamp Duty = (Transaction Value / 100.005) * 0.005
 = (99,900/100.005) * 0.005
 = 4.99

Accordingly, the amount of stamp duty of Rs. 4.99 will be deducted from the transaction value and for the balance amount, units will be allotted at applicable NAV.
