I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuate, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets.
- Past performance of the Sponsor /AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1,50,000/- (Rupees One Lakh Fifty Thousand Only) made by it towards setting up the Mutual Fund.
- The present Scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors / Risk Mitigation Measures:

- **Risk associated with Fixed Income and Money Market Instruments:**

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However in case of Government securities credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

In the case of floating rate instruments, an additional risk could arise because of the changes in the spreads of floating rate instruments. With the increase in the spread of floating rate instruments, the price can fall and with decrease in spread of floating rate instruments, the prices can rise. Moreover, the floating rate instruments having a periodical interest rate reset carry lower interest rate risk compared to a fixed rate debt security. However, in the falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government securities, there is minimal credit risk to that extent.

Different types of securities in which the Scheme would invest carry different types and levels of risk. Lower rated or unrated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

This refers to the ease with which a security can be sold at or near to its valuation i.e. yield-to maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and offer price quoted by a dealer.

Fixed income securities can be either listed on any stock exchange or may be unlisted. Moreover, the securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes and may lead to the Scheme incurring losses till

the security is finally sold. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

While money market instruments are fairly liquid but lack a well developed secondary market, which may restrict the ability of the Scheme to sell such instruments.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

| Type of Risk | Risk Mitigation Measures |
|----------------------|--|
| Volatility | By controlling class / sector / issuer exposures in debt & money market instruments to control overall portfolio volatility. |
| Concentration | By investing in various debt instruments such as corporate and PSU bonds, TREPS / Repo and money market instruments of various issuers which will be from different industries/sectors. |
| Liquidity | Investments will be made in debt & money market instruments having adequate liquidity in the secondary market. Staggered maturity profile in the portfolio to take care of liquidity. Dynamic monitoring of liquidity depending on the interest rate view. |
| Credit Risk | The internal credit scoring model to identify appropriate credits will be predominantly used by the Scheme for identifying the securities. Moreover, the external credit ratings of all the assets will be of investment grade or better. The internal credit assessment team will actively monitor the changing credit profile of all invested credits. |

- **Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement:**

Clearing Corporation of India Ltd. ('CCIL') is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations.

The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSGL account of the Member with RBI.

Invesco Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments.

To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses arising out of any default by its members from outright and repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades.

In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss.

The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

- **Risk Factor associated with investing in Tier I and Tier II Bonds:**

Tier I and Tier II Bonds are unsecured and the RBI prescribes certain restrictions in relation to the terms of these Bonds:

Tier I and Tier II bonds are unsecured in nature. The claims of the Bondholders shall (i) be subordinated to the claims of all depositors and general creditors of the Bank; (ii) neither be secured nor covered by any guarantee of the Issuer or its related entity or other arrangement that legally or economically enhances the seniority of the claim vis-a-vis creditors of the Bank; (iii) Unless the terms of any subsequent issuance of bonds/debentures by the Bank specifies that the claims of such subsequent bond holders are senior or subordinate to the Bonds issued under the Disclosure Document or unless the RBI specifies otherwise in its guidelines, the claims of the Bondholders shall be pari passu with claims of holders of such subsequent debentures/bond issuances of the Bank; (iv) rank pari passu without preference amongst themselves and other subordinated debt eligible for inclusion in Tier 1 / Tier 2 Capital as the case may be. The Bonds are not redeemable at the option of the Bondholders or without the prior consent of RBI.

The Bonds (including all claims, demands on the Bonds and interest thereon, whether accrued or contingent) are issued subject to loss absorbency features applicable for non-equity capital instruments issued in terms of Basel III Guidelines including in compliance with the requirements of Annex 5 thereof and are subject to certain loss absorbency features as described in bond prospectus and required of Tier 1 / Tier 2 instruments at the Point of Non Viability as provided for in Annex 16 of the aforesaid Basel III Guidelines as amended from time to time.

The Bonds are essentially non-equity regulatory instruments, forming part of a Bank's capital, governed by Reserve Bank of India (RBI) guidelines and issued under the issuance and listing framework given under Chapter VI of the SEBI (Issue and Listing of Non-Convertible Redeemable Preference Shares) Regulations, 2013 ("NCRPS Regulations"). These instruments have certain unique features which, inter-alia, grant the issuer (i.e. banks, in consultation with RBI) a discretion in terms of writing down the principal / interest, to skip interest payments, to make an early recall etc. without commensurate right for investors to legal recourse, even if such actions of the issuer might result in potential loss to investors. Payment of coupon on the Bonds is subject to the terms of Information Memorandum, including Coupon Discretion, Dividend Stopper Clause, Loss Absorption as contained in the Information Memorandum. The Bonds are subject to loss absorption features as per the guidelines prescribed by RBI.

There may be no active market for the Bonds on the platform of the Stock Exchanges. As a result, the liquidity and market prices of the Bonds may fail to develop and may accordingly be adversely affected:

There is no assurance that a trading market for the Bonds will exist and no assurance as to the liquidity of any trading market. Although an application will be made to list the Bonds on the NSE and/or BSE, there can be no assurance that an active market for the Bonds will develop, and if such a market were to develop, there is no obligation on the issuer to maintain such a market. The liquidity and market prices of the Bonds can be expected to vary with changes in market and economic conditions, financial condition and prospects and other factors that generally influence market price of such instruments. Such fluctuations may significantly affect the liquidity and market price of the Bonds, which may trade at a discount to the price at which one purchases these Bonds.

Issuer is not required to and will not create or maintain a Debenture Redemption Reserve (DRR) for the Bonds issued under this Disclosure Document:

As per the Companies (Share Capital and Debentures) Rules, 2014, as amended, no Debenture Redemption Reserve is required to be created by Banking Companies issuing debentures.

There is no assurance that the Tier I / Tier II bonds will not be downgraded:

The Rating agencies, which rate the Bonds, have a slightly different rating methodology for Tier I and Tier II bonds. In the event of deterioration of the financial health of the Issuer or due to other reasons, the rating of the Bonds may be downgraded whilst the ratings of other bonds issued by the issuer may remain constant. In such a scenario, for Tier I and Tier II Bond holders may incur losses on their investment.

- **Risk Factors Associated with repo transaction in Corporate Debt Securities:**

Counterparty Risk:

This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. Fund Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis and / or with entities regulated by SEBI/RBI/IRDA. In the event of default by the repo counterparty, the Scheme will have recourse to the corporate debt securities given as collateral to recover the investment by selling the collateral in the market. However, selling of collateral will also be subject to liquidity risk in the market and the Scheme may incur impact cost at the time of selling the collateral.

Collateral Risk:

Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations or there is downward migration in rating of collateral. Further if the rating of collateral goes below the minimum required rating during the term of repo or collateral becomes ineligible for any reason, counterparty will be expected to substitute the collateral. In case of failure to do so, IAMI / Schemes of the Fund will explore the option for early termination of the trade.

- **Risks associated with investing in Foreign Securities**

Subject to necessary approvals, the Scheme may also invest in overseas financial assets as permitted under the applicable regulations. The value of an investment in foreign securities may depend on general global economic factors or specific economic and political factors relating to the country or countries in which the foreign issuer operates. To the extent the assets of the Scheme are invested in overseas financial asset, there may be risk associated with fluctuation in foreign exchange rates, restriction on repatriation of capital and earnings under the exchange control regulations and transaction procedure in overseas market. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls, political circumstances, bi-lateral conflicts or prevalent tax laws.

Investment in foreign securities carries currency risk. Currency risk is a form of risk that arises from the change in price of one currency against other. The exchange risk associated with a foreign denominated instrument is a key element in foreign investment. This risk flows from differential monetary policy and growth in real productivity, which results in differential inflation rates. The risk arises because currencies may move in relation to each other.

- **Risks associated with Investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

- **Risks associated with Investing in Securitised Debt**

The Scheme may invest in securitized debt such as asset backed securities (ABS) or mortgage backed securities (MBS). ABS are backed by other assets such as credit card, automobile or consumer loan receivables, retail loan installment or participations in pools of leases. Credit support for these securities may be based on the underlying assets and/or provided through credit enhancements by a third party. The values of these securities are sensitive to changes in the credit quality of the underlying collateral, the credit strength of the credit enhancement, changes in interest rates and at times the financial condition of the issuer. MBS is an asset backed security whose cash flows are backed by the principal and interest payments of a set of mortgage loans. In the case of mortgage backed securities, these loans are usually first mortgages on residential properties. With asset backed securities, the loans might be credit card receivables, auto loans and leases or home equity loans. As the underlying loans are paid off by the borrowers, the investors in MBS/ABS receive payments of interest and principal over time.

MBS, particularly home loan transactions, are subject to interest-rate risk and prepayment risk. A change in interest rates can affect the pace of payments on the underlying loans, which in turn, affects total return on the securities. ABS also carries credit or default risks. If many borrowers on the underlying loans default, losses could exceed the credit enhancement level and result in losses to investors in an ABS transaction. ABS has structure risk due to a unique characteristic known as early amortization or early payout risk.

MBS carry interest rate risk. Maturity is a moving target with these securities. Depending on what happens to interest rates after issuing the MBS, the maturity of the bond could shorten or lengthen dramatically. This is because homeowners are allowed to refinance their mortgages as decline in interest rates encourages many homeowners to refinance their mortgages. Whereas rise in interest rates causes homeowners to hold on to their mortgages longer. This will extend the originally estimated maturity dates of MBS.

ABS and MBS are also subject to prepayment risk. When purchasing an MBS, investors usually calculate some degree of prepayment into their pricing. However, if prepayment happens unexpectedly or faster than predicted, it may result in reduced actual duration as compared to the expected duration of the paper at the time of purchase, which may adversely impact the portfolio yield.

The yield-to-maturity of such securities cannot be known for certain at the time of purchase since the cash flows are not known. When principal is returned early, future interest payments will not be paid on that part of the principal. If the bond was purchased at a premium, the bond's yield will be less than what was estimated at the time of purchase.

The credit enhancement stipulated represents a limited loss cover to the investors. These certificates represent an undivided beneficial interest in the underlying receivables and do not represent an

obligation of either the issuer or the seller or the originator, or the parent or any affiliate of the seller, issuer and originator. No financial recourse is available to the certificate holders against the investors' representative. Delinquencies and credit losses may cause depletion of the amount available under the credit enhancement and thereby the investor payouts to the certificate holders may get affected if the amount available in the credit enhancement facility is not enough to cover the shortfall. On persistent default of an obligor to repay his obligation, the servicer may repossess and sell the asset. However many factors may affect, delay or prevent the repossession of such asset or the length of time required to realise the sale proceeds on such sales. In addition, the price at which such asset may be sold may be lower than the amount due from that obligor.

These securities also carry risk associated with the collection agent. With respect to the certificates, the servicer will deposit all payments received from the obligors into the collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account especially considering that some of the collections may be in the form of cash. In this interim period, collections from the loan agreements may not be segregated from other funds of originator. If originator in its capacity as servicer fails to remit such funds due to investors, the investors may be exposed to a potential loss.

- **Risks associated with Securities Lending**

As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

- **Risks associated with Short Selling**

The Schemes may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

- **Risk Factors associated with investments in REITs and InvITs**

- **Market Risk:** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC / Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

- **Additional risks associated with the CE rated papers**

In addition to all the risks associated with the plain vanilla instruments like NCDs / Money market instruments etc., any instrument rated with the suffix (CE) is exposed to various additional risks on the basis of the explicit underlying Credit enhancement (CE) from a third party/ parent/ group company, in the form of corporate guarantee/ letter of comfort/ pledge of shares etc. The risk involved are:

- if the Credit Enhancement is in the form of Corporate Guarantee / Letter of Comfort, then there is a legal risk of enforcing the Corporate Guarantee / Letter of Comfort along with the credit risk pertaining to the Credit Enhancement provider.
- If the Credit Enhancement is in the form of pledge of shares, then the additional risks are those associated with equity price movement, share collateral cover, liquidity of shares pledged as collateral in the secondary market, availability of free shares with the CE provider to be provided as additional collateral. Further there is also a legal risk of enforcing the pledge of shares, operational risk in selling the shares in secondary market & the underlying impact cost.
- If the Credit Enhancement is in any other form, then there is a risk pertaining to legal enforceability of the credit enhancement and credit risk of the credit enhancement provider.

- **Risks associated with segregated portfolio**

- a) Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
- b) Security(ies) held in segregated portfolio may not realize any value.
- c) Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the Units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over 25% limit. Failure on the part of the said investor to redeem his exposure over 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. REQUIREMENT OF MINIMUM ASSETS UNDER MANAGEMENT IN THE SCHEME

Pursuant to provisions of SEBI circular no. Cir/ IMD/ DF/ 15 /2014 dated June 20, 2014, Scheme is required to maintain an Average Assets under Management (AUM) of Rs. 20 Crores on half yearly rolling basis. If average AUM of the Scheme on half yearly rolling basis is below Rs. 20 Crores, the AMC will scale up the AUM of the Scheme within a period of six months so as to comply with the requirements of Average AUM of Rs.20 Crores on half yearly rolling basis, failing which the provisions of Regulation 39(2) (c) of the Regulations would become applicable. Accordingly, the Scheme would be wound up and the Unit under the Scheme would be redeemed at applicable NAV. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

This may also affect the ability of the other Unit holders to redeem their units.
- As the liquidity of the Scheme's investments may sometimes be restricted by trading volumes and settlement periods, the time taken by the Fund for Redemption of Units may be significant in the event of an inordinately large number of Redemption requests. The Trustee has the right to limit redemptions under certain circumstances. Please refer to the section "**Restriction on Redemption / Switch-out of Units**".
- Pursuant to the Provisions of Prevention of Money Laundering Act, 2002, if after due diligence, the AMC believes that any transaction is suspicious in nature as regards money laundering, failure to

E. Compliance with Foreign Accounts Tax Compliance Act (“FATCA”)/ Common Reporting Standards (CRS)

The Central Board of Direct Taxes (CBDT) has notified Rules 114F to 114H (pertaining to FATCA-CRS), as part of the Income-tax Rules, 1962, which require Indian financial institutions such as Invesco Mutual Fund to seek additional personal, tax and beneficial owner information and certain certifications and documentation from its investors/unitholders. In this respect, the Mutual Fund would rely on the relevant information provided by its Registrar and would also use its discretion.

The onus to provide accurate, adequate and timely information would be that of the investor. In this regard, any change in the information provided should be intimated to the Mutual Fund promptly, i.e., within 30 days by the investors/unitholders. Investors/unitholders should consult their own tax advisors for any advice on tax residency or any other aspects of FATCA -CRS. Such investment limit shall be within the overall limit for debt instruments issued by a single issuer. Additional Tier I bonds and Tier II bonds issued under Basel III framework are some of the examples of debt instruments with special features.

The Scheme may use derivatives for purposes as may be permitted from time to time. The maximum gross derivative position will be restricted to 20% of the net assets of the Scheme.

The total investment/exposure in HFCs will not exceed 20% of the net assets of the Scheme. The scheme will adhere to the requirements prescribed by SEBI in this regard, as may be amended from time to time.

Subject to the SEBI Regulations, the asset allocation pattern indicated above may change from time to time keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary substantially depending upon the perception of the Fund Manager, the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and for defensive considerations only. The Fund Manager will restore asset allocation in line with the asset allocation pattern within 30 days. In case the portfolio is not re-balanced within 30 days, justification for the same shall be recorded in writing and will be placed before the investment committee. The investment committee will then decide on further course of action.

Whenever the Macaulay Duration of the Portfolio is reduced below the floor of 3 years, the AMC will record the reason for same with adequate justification and written justification will be placed before the subsequent Trustee meeting.

[^] **Macaulay Duration (as Defined by the RBI)**

Macaulay Duration of a bond is the number of years taken to recover the initial investment of a bond. It is calculated as the weighted average number of years to receive the cash flow wherein the present value of respective cash flows is multiplied with the time to that respective cash flows. The total of such values is divided by the price of the security to arrive at the duration.

Macaulay Duration is calculated as:

$$\text{Macaulay duration} = \frac{\sum_{t=1}^n \frac{tC}{(1+y)^t} + \frac{nM}{(1+y)^n}}{P}$$

Where;

t = period in which the coupon is received

C = periodic coupon payment

y = the periodic yield to maturity

n = number of periods

M = maturity value

P = market price of the bond / security

Let us understand the concept of Macaulay Duration with the help of an illustration:

Assume, a bond, with a Face Value of Rs 1,000, pays 6% coupon and matures in 4 years. Interest rate is 6% per annum. The bond pays the coupon annually and pays the principal + coupon on the final payment.

| Time Periods | Cash Flow Type | Annual Cash Flows (Rs.) | Present Value (PV) of Cash Flow @ 6% (interest rate) | PV * Time |
|--------------|--------------------|-------------------------|--|-----------|
| 1 | Coupon | 60 | 56.6 | 56.6 |
| 2 | Coupon | 60 | 53.4 | 106.8 |
| 3 | Coupon | 60 | 50.4 | 151.14 |
| 4 | Coupon + Principal | 1060 | 839.62 | 3358.48 |
| Total | | 1240 | 1000 | 3673.02 |

$$\begin{aligned} \text{Macaulay Duration} &= \text{PV} * \text{Time} / \text{Bond Price} \\ &= 3673.02 / 1000 \\ &= 3.67 \text{ years} \end{aligned}$$

D. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme will be predominantly invested in Debt and Money Market Instruments, such that the Macaulay duration of the portfolio is between 3 years to 4 years, which will include but not limited to:

1. Certificate of Deposits (CDs) is a negotiable money market instrument issued by scheduled commercial banks and select all-India Financial Institutions that have been permitted by the RBI to raise short term resources. The minimum denomination of CD should be Rs. 1 Lac and in multiples of Rs. 1 Lac thereafter. The maturity period of CDs issued by the Banks is between 7 days to one year, whereas, in case of FIs, maturity is between one year to 3 years from the date of issue. CDs may be issued at a discount to face value. Banks/ FIs cannot buy back their own CDs before maturity.
2. Commercial Paper (CPs) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. They are issued at a discount to the face value as may be determined by the issuer. CP is traded in secondary market and can be freely bought and sold before maturity.

3. Treasury Bills (T-Bills) are issued by the Government of India to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, 182 days and 364 days. T-bills are issued at a discount to their face value and redeemed at par.
4. Tri-party Repo means a repo contract where a third entity (apart from the borrower and lender), called a Tri-party Agent, acts as an intermediary between the two parties to the repo to facilitate services like collateral selection, payment and settlement, custody and management during the life of the transaction.
5. Non-convertible debentures as well as bonds are securities issued by companies / institutions promoted / owned by the Central or State governments and statutory bodies, which may or may not carry a Central/State government guarantee, public and private sector banks, All India Financial Institutions, private sector companies. These instruments may be secured against the assets of the company or unsecured and generally issued to meet the short term and long term fund requirements. Rate of interest on such instruments would depend upon spread over corresponding government security, perceived risk, rating, tenor etc. These instruments include fixed interest security with/without put/call option, floating rate bonds, zero coupon bonds. Frequency of the interest payment could be either monthly/quarterly/half-yearly or annually.
6. Floating rate debt instruments are debt instruments issued by Central government, State government, corporates, PSUs etc. with coupon reset periodically. The periodicity of reset could be daily, monthly, quarterly, half yearly and annually or any other periodicity as may be mutually agreed between the issuer and the Fund. The fund manager will have the flexibility to invest the debt component into floating rate debt securities in order to reduce the impact of rising interest rate in the economy.
7. Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds. When the seller sells the security with an agreement to repurchase it, it is Repo transaction whereas from the perspective of buyer who buys the security with an agreement to sell it at a later date, it is reverse repo transaction. Presently in India, G-Secs, State government securities, T-Bills and corporate debt securities are eligible for Repo/Reverse Repo.
8. Securities created and issued by the Central and State Governments as may be permitted by RBI, securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). Special securities issued by the Government of India to entities like Oil Marketing Companies, Fertilizer Companies, the Food Corporation of India, etc. (popularly called oil bonds, fertilizer bonds and food bonds respectively) and special securities issued by the State Government under “Ujwal DISCOM Assurance Yojana (UDAY) Scheme for Operational and Financial Turnaround of Power Distribution Companies (DISCOMs)” notified by Ministry of Power vide Office Memorandum (No 06/02/2015-NEF/FRP) dated November 20, 2015, (popularly called as UDAY Bonds). Central Government Securities are sovereign debt obligations of the Government of India with zero-risk of default and issued on its behalf by RBI. They form part of Government’s annual borrowing programme and are used to fund the fiscal deficit along with other short term and long term requirements. Such securities could be fixed rate, fixed interest rate with put/call option, zero coupon bond, floating rate bonds, capital indexed bonds, fixed interest security with staggered maturity payment etc.
9. Securitized Assets: Securitization is a structured finance process which involves pooling and repackaging of cash-flow producing financial assets into securities that are then sold to investors. They are termed as Asset Backed Securities (ABS) or Mortgage Backed Securities (MBS). ABS are backed by other assets such as credit card, automobile or consumer loan receivables, retail installment loans or participations in pools of leases. Credit support for these securities may be based on the underlying assets and/or provided through credit enhancements by a third party. MBS is an asset backed security whose cash flows are backed by the principal and interest payments of a set of mortgage loans. Such mortgage could be either residential or commercial properties. ABS/MBS instrument reflect the undivided interest in the underlying assets and do not represent the obligation of the issuer of ABS/MBS or the originator of underlying receivables. Third category of the

securitized assets can also be in the form of securitization of future fixed receivables under a service contract. Securitization often utilizes the services of Special Purpose Vehicle.

10. Pass Through Certificate (PTC) represents beneficial interest in an underlying pool of cash flows. These cash flows represent dues against single or multiple loans originated by the sellers of these loans. PTCs may be backed, but not exclusively, by receivables of personal loans, car loans, two wheeler loans and other assets subject to applicable regulations.
11. Debt Instruments with special features viz. subordination to equity (absorbs losses before equity capital) and /or convertible to equity upon trigger of a pre-specified event for loss absorption. Additional Tier I bonds and Tier 2 bonds issued under Basel III framework are some instruments which may have above referred special features.
12. Derivative Instrument like Interest Rate Swaps, Forward Rate Agreement and such other derivative instruments as may be permitted under the Regulations.
 - a). Interest Rate Swap - An Interest Rate Swap (IRS) is a financial contract between two parties exchanging or swapping a stream of interest payments for a “notional principal” amount on multiple occasions during a specified period. Such contracts generally involve exchange of a “fixed to floating” or “floating to fixed rate” of interest. Accordingly, on each payment date that occurs during the swap period, cash payments based on fixed/ floating and floating rates are made by the parties to one another.
 - b). Forward Rate Agreement - A Forward Rate Agreement (FRA) is a financial contract between two parties to exchange interest payments for a ‘notional principal’ amount on settlement date, for a specified period from start date to maturity date. Accordingly, on the settlement date, cash payments based on contract (fixed) and the settlement rate, are made by the parties to one another. The settlement rate is the agreed benchmark/ reference rate prevailing on the settlement date.
13. Clearcorp Repo Order Matching System (CROMS) is a Straight Through Processing (STP) enabled anonymous Order Matching Platform launched by Clearcorp Dealing Systems (India) Ltd. for facilitating dealing in Market Repos in all kinds of Government Securities. It enables dealing in two kinds of Repos – (1) Basket and (2) Special Repos. Building on the internationally popular Standard Repo Model, Basket Repos enables dealing in baskets wherein repoable securities have been classified based on instrument type, liquidity and outstanding tenor and clustered together. While borrowers can raise funds through a Basket Repo against any of security forming part of the concerned basket, the lender is assured that it would receive only any of the securities forming part of the concerned basket. Details of security allocated are known to both counterparties post trade. As for Special Repos, which is the conventional repo, both borrower and lender are aware of the underlying security against which deal is sought to be concluded. CROMS provides better transparency, repo rate discovery and operational efficiency.
14. Cash Management Bills (CMB) are issued by Government of India to meet the temporary cash flow mismatches of the Government. CMBs are non-standard, discounted instruments issued for maturities less than 91 days. CMBs are issued at discount to the face value through auctions. The settlement of the auction will be on T+1 basis.
15. Bills Rediscounting.
16. “REIT” or “Real Estate Investment Trust” shall have the meaning assigned in clause (zm) of sub-regulation 1 of regulation 2 of the Securities and Exchange Board of India (Real Estate Investment Trusts) Regulations, 2014. REITs are companies that own and lease out commercial or residential real estate. The rental incomes from the properties are shared among REIT investors, who are allotted units. These units are tradeable on exchanges.
17. “InvIT” or “Infrastructure Investment Trust” shall have the meaning assigned in clause (za) of sub-regulation (1) of regulation 2 of the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014. InvITs are similar to REITs, except these own infrastructure assets not real estate.

All such investments shall be made with the prior approval of the Board of AMC & Trustee.

Additional disclosures for investments in securitized debt:

1. How the risk profile of securitized debt fits into the risk appetite of the Scheme

Securitized debt like any other fixed income asset class has its attendant risks like interest rate risk, credit risk, liquidity risk etc. In our opinion, the primary risk with respect to securitized debt is the liquidity risk in addition to the underlying risk on the nature of the receivables. Any investment in securitized debt can fit the risk appetite of the Scheme depending on the various factors like underlying credit risk on receivables, rating profile and the average tenor of the securitized debt.

Internal criteria for inclusion of securitized debt in portfolio of the Scheme:

Keeping in line with nature of the Scheme, the average tenor of the securitized debt would be restricted so that the overall Macaulay duration of the fund remains within the permitted boundaries.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

Originators have been broadly categorized as follows:

- i. PSU Banks;
- ii. Private Banks;
- iii. NBFC's with asset size of Rs. 5,000 crores and above; and
- iv. NBFC's with asset size of below Rs. 5,000 crores; and
- v. Corporates.

Before the assessment of the structure is undertaken, the originators/ underlying issuers are evaluated on the following parameters:

- Track record - a minimum of 5 years
- Willingness to pay - credible promoters with a strong management team.
- Ability to pay - strong financials
- Risk appraisal capabilities - strong and well defined risk assessment processes
- Business risk assessment of the originators based on the following factors:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Company specific factors
- Standalone long term credit rating - not lower than "A+".

In addition a detailed review and assessment is done including interactions with the company as well as the credit rating agency.

Some of the Critical Evaluation Parameters (for pool loan and single loan securitization transactions) regarding the originator / underlying issuer which would disqualify the structure would be:

- Default track record/ frequent alteration of redemption conditions / covenants;
- High leverage ratios of the ultimate borrower (for single-sell downs) - both on a standalone basis as well on a consolidated level/ group level;
- Higher proportion of reschedulement of underlying assets of the pool or loan, as the case may be;
- Higher proportion of overdue assets of the pool or the underlying loan, as the case may be;
- Poor reputation in market;

- Insufficient track record of servicing of the pool or the loan, as the case may be;
- The degree of NPAs of the company being substantially higher than the industry trends.

3. Risk mitigation strategies for investments with each kind of originator

In the case of single loan PTCs as the entire risk is on the underlying originator, the underlying originator has to be duly approved by the internal credit team. Even for the pooled PTCs before assessing the underlying loan pool of any the originator, it is also required to be an approved credit with the AMC. This is so as to have a fair understanding of the way the company conducts its business as that has a very important bearing on the quality of underlying pool of loans and also because the originator services the pool. The long term credit rating and the originators relative position in the sector that it operates in, is also considered, so as to give a holistic understanding of the strength of the originator.

Some of the key factors looked at for ABS / MBS securitized debt apart from the credit qualities of the originator are:

- The size and reach of the originator - This is important as this helps in having a larger number of locations to choose from to create a pool of assets and thereby reduce concentration risk.
- The collection process, collection infrastructure and follow up mechanism - a strong collection process in terms of a well-defined reporting structure within the collection team, a well-defined escalation process, experienced manpower help ensure that before a loan goes into write-off, every possible measure is undertaken to prevent a delinquency.
- The quality of the management information system (MIS) - a strong MIS system helps in evaluating the quality of the loan pool as lack of extensive data hinders a comprehensive evaluation. It also helps the management of the company undertake remedial measures if they notice any sharp increase in NPA's, frauds etc. from a particular location, state, borrower segment etc. which in turn helps in protecting the portfolio quality of the pool.
- Type of originator - the reach and systems and processes varies depending on the type of the originator and therefore it would have a bearing on the credit enhancement required.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

In the case of pool PTCs the level of diversification with respect to geography, loan to value, original tenure, seasoning and underlying mix of assets is not standardized and varies from originator to originator, the economic scenario and type of asset class.

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction is as under:

| Characteristics/ Type of Pool | Mortgage Loan | Commercial Vehicle and Construction Equipment | CAR | 2 Wheelers | Micro Finance Pools | Personal Loans | Single Sell Downs | Others |
|---|---------------|---|-----------|------------|---------------------|----------------|-------------------|--------|
| Approximate Average maturity (in Months) | 108 months | 18 months | 12 months | 10 months | 12 months | 10 months | NA | NA |
| Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche) | 10-20% | 10-15% | 10%-20% | 15-20% | 20-30% | 20-25% | NA | NA |

| Characteristics/ Type of Pool | Mortgage Loan | Commercial Vehicle and Construction Equipment | CAR | 2 Wheelers | Micro Finance Pools | Personal Loans | Single Sell Downs | Others |
|----------------------------------|------------------|---|----------------|---------------------|---------------------|-----------------|-------------------|--------|
| Average Loan to Value Ratio | 95% | 97% | 90% | 90% | NA | NA | NA | NA |
| Average seasoning of the Pool | 6-8 months | 2-3 months | 2-3 months | 2-3 months | 1-2 months | 2-3 months | NA | NA |
| Maximum single exposure range | Rs. 1-1.5 crores | Rs. 20-25 lakhs | Rs 25-30 lakhs | Rs. 0.75-0.85 lakhs | Rs. 0.20-0.25 lakhs | Rs. 25-30 lakhs | NA | NA |
| Average single exposure range % | 1-1.5% | 1.50-2% | 1.50-2% | 1.50-2% | 0.05-0.10%- | 1.50-2% | NA | NA |

Any relaxations in the above consideration parameters can be made on the basis of the overall credit assessment of the securitized debt.

Some of the risk mitigating measures used are as under. These would vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency.

- Size of the loan
- Average original maturity of the pool
- Loan to Value Ratio
- Average seasoning of the pool
- Default rate distribution
- Geographical Distribution
- Credit enhancement facility
- Liquid facility
- Structure of the pool

5. Minimum retention period of the debt by originator prior to securitization

For investments in PTCs, where the assets have been pooled, the minimum retention period should be 1 month for loans with an average tenor of upto 18 months, 2 months for loans with a average tenor of upto 3 years, 6 months for loans with an average tenor of upto 5 years and 8 months for loans with an average tenor of more than 5 years.

In case Minimum retention period is prescribed by regulator at a future date, the Scheme will comply with the said minimum retention period requirement.

6. Minimum retention percentage by originator of debts to be securitized

For investments in PTCs, where the assets have been pooled, the minimum retention percentage is 5% of the book value of the loans being securitized for loans with a residual tenor of upto 24 months and 10% for loans with a residual tenor of more than 24 months.

In case Minimum retention period is prescribed by regulator at a future date, the Scheme will comply with the said minimum retention period requirement.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

With respect to single loan PTCs, the AMC believes in doing a comprehensive credit appraisal of the underlying loan than the originator of the loan. If the underlying credit is found to be credit-worthy and the interest rate is attractive, irrespective of whether the instrument is a single loan PTC or a NCD/ CP issued by the company, the fund management team can invest in the securitized debt. The originator of the loan is seen more as a facilitator in the deal, earning their transaction margins.

In the case of pool PTCs, the fund management team will invest in the instrument after doing a comprehensive credit appraisal of the characteristics of the loan pool. Investment in the same will be based on the strength of the same with weightage being given to the originator.

The conflict of interest, if any, would be similar to that existing in case the investment made in the NCD or CP of the underlying company.

8. The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The AMC has credit analyst(s) analyzing credit risk on each investment. As an internal policy, fund manager can buy any instrument, only post approval of the credit from the Credit Analyst and within the limits set by the Credit Analyst. Clear segregation of independent credit analysis by Credit Analyst and subsequent investment by fund manager resolves conflict of interest. Credit Analysts also maintain separate internal notes on each individual securitized debt instrument - outlining underlying company / pool risks and mitigants for the same and balancing the same with resultant higher yields.

The credit analyst also monitors the performance of the company/pool and the credit rating assigned to the underlying assets as also the credit rating of originator.

The following disclosure may also be given:

Wherever the schemes portfolio is disclosed, the AMC will give a comprehensive disclosure of securitized debt instruments held. This would include the originator and underlying asset exposure by percentage, e.g. percentage of two wheeler loans in the pool, percentage of commercial vehicle loans in the pool etc.

Guidelines for participation in repo transactions in corporate debt securities

The Scheme shall participate in repo transactions in corporate debt securities subject to following guidelines:

A. Category and Credit Rating of Counterparty:

The Scheme will enter into repo transaction only with those counterparties which are rated AA and above and which are approved by Fixed Income team and with whom the Fund has approved credit limits. In case if counterparty has more than one rating from Credit Rating Agencies, then the most conservative publicly available rating would be considered.

B. Eligible Collateral:

The Scheme will participate in repo transactions only in AAA or equivalent rated corporate debt securities and tenure of collateral shall not exceed 5 years residual maturity where the Scheme is lending. For repo transactions where the Scheme is borrowing, collateral rated AA and above will be eligible and no tenor restrictions will apply.

C. Tenor of Repo:

As per the current RBI guidelines, repo in corporate debt securities shall be undertaken for a minimum period of one day and a maximum period of one year.

Accordingly, where the Scheme is lending money in repo transaction, then the tenor of repo shall not exceed a period of one business day. Where the Scheme is borrowing money in repo transactions, then the tenor of transaction shall not exceed 6 (Six) months.

D. Applicable Hair-Cut:

As per RBI guidelines, Collaterals shall be priced transparently at prevailing market prices, in the first leg of a repo. The price for the second leg shall be the price for the first leg of transaction plus interest.

Currently, RBI circular provides below guidelines on haircut / margins which will be decided either by the clearing house or may be bilaterally agreed upon, in terms of the documentation governing repo transactions:

- i) Listed corporate bonds and debentures shall carry a minimum haircut of 2% of market value. Additional haircut may be charged based on tenor and illiquidity of the security
- ii) CPs and CDs shall carry a minimum haircut of 1.5% of market value

Securities issued by a local authority shall carry a minimum haircut of 2% of market value. Additional haircut may be charged based on tenor and illiquidity of the security.

In terms of RBI guidelines, the repo transactions will be subject to following hair-cuts:

| Collateral Type Collateral Residual Maturity | Minimum Haircut | |
|---|-----------------|-------------------|
| | upto 1 year | 1 year to 5 years |
| AAA rated debt securities | 3% | 5% |

The above are minimum hair-cut percentages and AMC may apply higher hair-cuts depending upon various factors i.e. residual maturity, counterparty, liquidity of collateral etc.

Note: The above guidelines for counterparty and hair-cuts are applicable only for transaction which are OTC trades. For Electronic Trading Platform ('ETP') and trades reported on Exchange, the guidelines as prescribed by the Exchange shall be applicable.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates.

The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz., Government Securities Market or G-Sec Market and Corporate Debt Market. The latter is further classified as market for PSU Bonds and Private Sector Bonds. The Government Securities (G-Secs + T-bills) market, with market capitalization Rs. 81,17,249 crores as on May 2021 (Source: RBI), is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The outstanding dated securities of the Government of India is Rs. 7,30,28,372 Crores as on June 2021 (Source - Bloomberg) as compared to the outstanding dated securities of the Government of India is Rs. 60,51,993 Crores as on Dec 2019 (Source - Bloomberg). The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the government securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, Cash Management Bills etc. The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian debt market. However, recently there was a significant increase in corporate bond issuances, particularly since it is at a more attractive rate than bank financing. The total traded volume in corporate bonds during April 20 - March 21 was Rs. 18,72,718 Crores vis-à-vis Rs. 20,64,806 Crores during April 19 - March 19 (Source: SEBI). A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

In money market, activity levels of the Government and non-government debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri-party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government Securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Though not strictly classified as money market instruments, PSU / PFI /Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing on June 7, 2021 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy.

| Instrument | Current Yield (% p.a.) |
|---------------------------|-------------------------------|
| Tri-party Repo | 3.24 |
| Repo | 3.35 |
| 91 Day T-Bill | 3.41 |
| 182 Day T-Bill | 3.65 |
| 364 Day T-Bill | 3.74 |
| 91 days CD | 3.45 |
| 180 days CD | 3.75 |
| 365 days CD | 4.00 |
| GOI Securities (10 Years) | 6.02 |

The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

Securities Lending

Securities lending means the lending of securities to approved intermediary for a fixed period of time, at a negotiated compensation in order to enhance returns of the portfolio. The securities lent will be returned by the approved intermediary on the expiry of stipulated period.

Subject to the SEBI Regulations, the Scheme may engage in securities lending. Such lending shall be made when, in view of the fund manager, it could provide reasonable returns commensurate with risks associated with such lending and shall be made in accordance with the investment objective of the Scheme.

The Scheme may lend securities from its portfolio in accordance with the Regulations and applicable SEBI guidelines. Securities lending shall enable the Scheme to earn income in the form of lending fees that may partially offset its expenses and thereby reduce the effect these expenses have on the Scheme's ability to provide investment returns that correspond generally to the performance of its Benchmark Index. The Scheme will pay administrative and other expenses, fees in connection with the lending of securities. The Scheme will comply with the guidelines for securities lending specified by SEBI/ Clearing House of stock exchange (s).

The Scheme shall not deploy more than 20% of its net assets in securities lending and not more than 5% of the net assets will be deployed in securities lending to any single intermediary.

The Scheme will comply with all the applicable circulars issued by SEBI as regard to securities lending viz. SEBI Circular no. MFD/CIR/01/047/99 dated February 10, 1999 and SEBI Circular No. SEBI/IMD/CIR No 14/ 187175/2009 dated December 15, 2009 and framework for short selling and borrowing and lending of securities notified by SEBI vide its circular no. MRD/DoP/SE/ Dep/Cir-14/2007 dated December 20, 2007, as may be amended from time to time.

E. INVESTMENT STRATEGY

The Scheme will invest in a portfolio of debt and money market instruments with an aim to generate income from active credit spread management, while maintaining portfolio Macaulay duration between 3-4 years under normal circumstances. The Scheme will identify mispriced assets in the market to generate additional returns. At all times, the Scheme will target securities which can offer optimal level of yields/returns, while giving due emphasis to its risk-reward characteristics. The investments will be made following a detailed assessment of the liquidity, rates and the state of the credit market. The allocation will largely be in the corporate debt and money market segment of the curve and in the sovereign segment of the market. The Scheme will take controlled and selective exposure to high credit quality investments from the list approved by the proprietary credit assessment model (from time to time), which is a credit scoring model targeted to identify the credit strength of the borrower. The management team will also keep tab of the rate environment, liquidity, macroeconomic parameters and use various portfolio construction levers of instrument, spreads, security, liquidity, diversification, duration and credit quality to identify the appropriateness of any position in the portfolio.

RISK CONTROL

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to VAR, tracking error etc. Further AMC has implemented Bloomberg Asset and Investment Manager System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager to calculate various risk ratios, average duration and analyze the same.

INVESTMENT IN DERIVATIVES

The Scheme may invest in various derivative instruments, which are permissible under the applicable Regulations and shall also be subject to the investment objective and strategy of the Scheme and the internal limits, if any, as laid down from time to time.

The Scheme may use derivative instruments like interest rate swaps, overnight indexed swaps (OIS), forward rate agreements or such other derivative instruments as may be permitted under the Regulations. Derivatives will be used for the purpose of hedging, increasing the returns of the Scheme and portfolio balancing or such other purpose as may be permitted under the Regulations and Guidelines from time to time.

The Scheme will comply with all the applicable circulars issued by SEBI as regard to derivatives viz. SEBI Circular no. SEBI/MFD/CIR No. 03/ 158 /03 dated June 10, 2003, no. DNPD/Cir-29/2005 dated September 14, 2005, no. SEBI/IMD/CIR No. 9/108562/07 dated November 16, 2007, no. Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio.

In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by Reserve Bank of India permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the fund will use derivative instruments for the purpose of hedging and portfolio balancing. Further, the guidelines issued by Reserve Bank of India from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the mutual fund.

As per above said RBI circulars, mutual funds are permitted to do interest rate swaps/forward rate agreements, for hedging purposes only. Accordingly, the AMC would undertake the same for similar purposes only. IRS and FRAs do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in derivatives will be in accordance with the extant SEBI regulations / guidelines. Presently derivatives shall be used for hedging and / or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, using the IRS route it is possible to generate better returns / meet the objective of the scheme at a lower cost. e.g. if buying a 2 Yr Mibor based instrument and receiving the 2 Yr swap rate yields better return than the 2 Yr AAA corporate, the scheme would endeavor to do that. Alternatively, the scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Using Overnight Indexed Swaps

In a rising interest rate scenario, the Scheme may enhance returns for the investor by hedging the risk on its fixed interest paying assets by entering into an OIS contract where the Scheme agrees to pay a fixed interest rate on a specified notional amount, for a pre-determined tenor and receives floating interest rate payments on the same notional amount. The fixed returns from the Scheme's assets and the fixed interest payments to be made by the Scheme on account of the OIS transaction offset each other and the Scheme benefits on the floating interest payments that it receives.

The Scheme may enter into an opposite position in case of a falling interest rate scenario, i.e. to hedge the floating rate assets in its portfolio the Scheme enters into an OIS transaction wherein it receives a fixed interest rate on a specified notional amount for a specified time period and pays a floating interest rate on the same notional amount. The floating interest payments that the Scheme receives on its floating rate securities and the floating interest payments that the Scheme has to pay on account of the OIS transaction offset each other and the Scheme benefits on the fixed interest payments that it receives in such a scenario.

Swap

Assume that the Scheme has a Rs. 20 crore floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 12%) and pays the "benchmark rate" (MIBOR), which is fixed by the National Stock Exchange of India limited (NSE) or any other agency such as Reuters. This swap would effectively lock-in the rate or 12% for the next 6 months, eliminating the daily interest rate risk. This usually routed through an intermediary who runs a book and matches deals between various counterparties.

The steps will be as follows:

Assuming the swap is for Rs. 20 Crores for September 1, 2020 to March 3, 2021. The Scheme is a fixed rate receiver at 12% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).

On September 1, 2020 the Scheme and the counterparty will exchange only a contract of having entered this swap. This documentation would be as per International Swap Dealers Association (ISDA) norms.

On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On March 3, 2021 they will calculate the following:

- The Scheme is entitled to receive interest on Rs. 20 Crores at 12% for 184 days i.e. Rs. 1.21 Crores, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
- The counterparty is entitled to receive daily compounded call rate for 184 days & pay 12% fixed.
- On March 3, 2021, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 1.21 Crores, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.

- Effectively the Scheme earns interest at the rate of 12% p.a. for six months without lending money for 6 months fixed, while the counterparty pays interest @ 12% p.a. for 6 months on Rs. 20 Crores, without borrowing for 6 months fixed.

The above example illustrates the benefits and risks of using derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement

Assume that on May 1, 2021, the 30 day commercial paper (CP) rate is 7.75% and the Scheme has an investment in a CP of face value Rs. 50 Crores, which is going to mature on May 31, 2021. If the interest rates are likely to remain stable or decline after July 31, 2020, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month does not want to take the risk of interest rates going down, he can then enter into a following forward rate agreement (FRA) say as on May 31, 2021:

He can receive 1 X 3 FRA on May 31, 2021 at 7.75% (FRA rate for 2 months lending in 1 months' time) on the notional amount of Rs. 50 Crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. May 31, 2021 falls to 7.50%, then the Scheme receives the difference 7.75 - 7.50 i.e. 25 basis points on the notional amount Rs. 50 Crores.

Certain risks are inherent to derivative strategies viz. lack of opportunities, inability of derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

PORTFOLIO TURNOVER

The Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. The fund management team depending on its view and subject to there being an opportunity, may trade in securities, which will result in increase in portfolio turnover. Further, in the debt market, trading opportunities may arise due to changes in interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors where in the opinion of the fund manager there is an opportunity to enhance the total return of the portfolio, which will result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to measure with reasonable accuracy the likely turnover in the portfolio of the Scheme.

INVESTMENT BY THE AMC IN THE SCHEME

Under Regulation 28(4) of the SEBI (MF) Regulations, the AMC will invest not less than one percent (1%) of the amount raised in New Fund Offer of the Scheme or Rs.50 lacs, whichever is less, in the growth option of the Scheme and such investment will not be redeemed unless the Scheme is wound up.

In addition to investments as mandated under Regulation 28(4) of the Regulations as mentioned above, the AMC may invest in the Scheme in the New Fund Offer Period or on an ongoing basis subject to the SEBI (MF) Regulations.

As per the existing SEBI (MF) Regulations, the AMC will not charge investment management and advisory fee on the investment made by it in the Scheme.

F. FUNDAMENTAL ATTRIBUTES

In terms of Regulation 18 (15A) of the SEBI (MF) Regulations, following are the Fundamental attributes of the Scheme:

Invesco India Medium Duration Fund is an open ended medium term debt scheme investing in instruments such that the Macaulay duration[^] of the portfolio is between 3 years and 4 years.

(ii) Investment Objective

To generate income by investing in a portfolio of Debt and Money Market Instruments such that the Macaulay duration of the portfolio is between 3 years and 4 years.

However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

(iii) Investment Pattern:

However, the Fund Manager, in the interest of investors, may reduce the portfolio duration of the Scheme upto 1 year in case he has views on the interest rate movements in the light of anticipated adverse situation.

Under anticipated adverse circumstances, the asset allocation of the Scheme would be as follows:

| Instruments | Indicative Allocations (% of net assets) | | Risk Profile |
|--|---|---------|-----------------|
| | Minimum | Maximum | High/Medium/Low |
| Debt (including government securities) and Money Market Instruments* | 0 | 100 | Low to medium |

The cumulative gross exposure through debt, fixed income derivative positions, repo transactions and credit default swaps in corporate debt securities, REITs, InvITs, other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time, subject to regulatory approvals, if any, should not exceed 100% of the net assets of the scheme.

(iv) **Terms of Issue**

➤ **Liquidity provisions:**

The Scheme being open ended, the Units of the Scheme are not proposed to be listed on any stock exchange. However, the AMC/Trustee reserve the right to list the Units as and when the AMC/Trustee considers it necessary in the interest of Unit holders of the Scheme.

The Scheme will offer Units for purchase and redemption at Applicable NAV on all Business Days on an ongoing basis commencing not later than 5 Business Days from the date of allotment. The Mutual Fund will dispatch the redemption proceeds within 10 business days from the acceptance of a valid redemption request. In case the redemption proceeds are not dispatched within 10 Business Days of the date of receipt of valid redemption request, the AMC will pay interest @ 15% p.a. or such other rate as may be prescribed from time to time.

➤ **Aggregate fees and expenses**

Please refer to section IV B. 'Fees and Expenses'.

➤ **Any safety net or guarantee provided**

This Scheme does not provide any safety net or guaranteed or assured returns.

In accordance with Regulation 18(15A) of the SEBI (MF) Regulations, the Trustees shall ensure that no change in the fundamental attributes of the Scheme and the Plan(s) / Option(s) there under or the trust or fee and expenses payable or any other change which would modify the Scheme and the Plan(s) / Option(s) there under and affect the interests of Unit holders is carried out unless:

- A written communication about the proposed change is sent to each Unit holder and an advertisement is given in one English daily newspaper having nationwide circulation as well as in a newspaper published in the language of the region where the Head Office of the Mutual Fund is situated; and
- The Unit holders are given an option for a period of 30 days to exit at the prevailing Net Asset Value without any exit load.

Further, prior approval of SEBI will be obtained before effecting the changes in fundamental attributes.

Creation of Segregated Portfolio:

Creation of segregated portfolio shall be subject to guidelines specified by SEBI from time to time and includes the following:

The term 'segregated portfolio' shall mean a portfolio comprising of debt or money market instrument affected by a credit event, that has been segregated in a mutual fund scheme and the term 'main portfolio' shall mean the scheme portfolio excluding the segregated portfolio. The term 'total portfolio' shall mean the scheme portfolio including the securities affected by the credit event.

- 1) Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (**CRA**), as under:
 - a) Downgrade of a debt or money market instrument to 'below investment grade', or
 - b) Subsequent downgrades of the said instruments from 'below investment grade', or
 - c) Similar such downgrades of a loan rating
- 2) In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. Creation of segregated portfolio shall be based on issuer level credit events as mentioned above and implemented at the ISIN level.
- 3) In case the Scheme is holding any unrated debt or money market instruments of issuer that does not have any outstanding rated debt or money market instruments, segregated portfolio of such unrated debt or money market instruments may be created only in the following circumstances:
 - a) There is actual default of either the interest or the principal amount by the said issuer; or
 - b) Pursuant to dissemination of information by AMFI about the actual default by the said issuer.

- 3) If the Trustee do not approve the proposal to segregate portfolio, AMC will issue a press release immediately informing investors of the same and subscription and redemption applications will be processed based on the NAV of total portfolio.
- 4) Notwithstanding the decision to segregate the debt and money market instrument, the valuation shall take into account the credit event and the portfolio shall be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 1996 and circular(s) issued thereunder.

| <p>Plans / Options offered</p> | <p>The Scheme offers a separate plan for investments directly with the Fund (i.e. application not routed through Distributor).</p> <p>Thus, the Scheme offers two Plans as follows:</p> |

- Regular Plan
- Direct Plan

Each of the above Plans under the Scheme offer following options:

| Options | Sub-options | Frequency |
|---------|-------------------|---------------|
| IDCW | IDCW Payout | Quarterly |
| | | Discretionary |
| | IDCW Reinvestment | Quarterly |
| | | Discretionary |
| Growth | Nil | Nil |

Direct Plan will have a lower expense ratio excluding distribution expenses, commission for distribution of Units etc. Direct Plan is only for investors who purchase /subscribe Units directly with the Fund (i.e. application not routed through Distributor). Investments under Direct Plan can be made through various modes offered by the Fund for investing directly with the Fund (except Stock Exchange Platform(s) and all other Platform(s) where investors' applications for subscription of units are routed through Distributors). Further Registered Investment Advisors (RIAs) can also purchase units of Direct Plan on behalf of their clients through NMF-II platform of National Stock Exchange of India Ltd. and/or BSE StAR MF System of BSE Ltd.

The portfolio of Direct Plan will form part of portfolio of the Scheme and there will be no separate portfolio for Direct Plan. Further, both the options i.e. Growth and IDCW will have common portfolio under the Scheme.

Growth option

IDCW will not be declared under this option. The income attributable to Units under this option will continue to remain invested in the respective plans and will be reflected in the Net Asset Value of Units under this option.

IDCW option

Under this option, IDCW will be declared at specified frequencies / periodic intervals at the discretion of the Trustees, subject to availability of distributable surplus calculated in accordance with SEBI (MF) Regulations. The amounts can be distributed out of investors capital (Equalization Reserve), which is part of sale price that represents realized gains. On payment of IDCW, the NAV of the units under IDCW option will fall to the extent of the IDCW payout and applicable statutory levies, if any.

| Frequency [^] | Record Date |
|------------------------|---|
| Quarterly | 15 th day of last month of each calendar quarter (i.e. March, June, September & December) \$ |

\$ In case the record date falls on a non-Business Day, then the immediately succeeding Business Day will be considered. AMC reserves the right to change the record date from time to time.

[^]The above details of IDCW frequency and record date are also applicable to Direct Plan offered under the Scheme.

It must be distinctly understood that the actual declaration of IDCW and frequency thereof is at the sole discretion of Board of Trustee. There is no assurance or guarantee to the Unit holders as to the rate of IDCW distribution nor that will the IDCW be paid regularly.

IDCW Payout

Under this facility, IDCW declared, if any, will be paid (subject to deduction of tax at source and applicable statutory levy, if any) to those Unit holders, whose names appear in the register of Unit holders on the notified record date.

Where the amount of IDCW payable is equal to or less than Rs. 100/- in the plan/option, the same shall be compulsorily reinvested in the respective plan / option of the Scheme.

IDWC Reinvestment

Under this facility, the IDCW due and payable to the Unit holders will be compulsorily and without any further act by the Unit holder, reinvested in the respective IDCW option at a price based on the prevailing ex-IDCW Net Asset Value per Unit on the record date. The amount of IDCW re-invested will be net of tax deducted at source, wherever applicable. The IDCW so reinvested shall constitute a constructive payment of IDCW to the Unit holders and a constructive receipt of the same amount from each Unit holder for reinvestment in Units.

On reinvestment of IDCW, the number of Units to the credit of Unit holder will increase to the extent of the IDCW reinvested divided by the Applicable NAV. **There shall, however, be no Entry Load and Exit Load on the IDCW so reinvested.**

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the Principle of fair valuation as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units of the Scheme shall be calculated by either of the following methods shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

Or

$$\text{NAV (Rs.)} = \frac{\text{Unit Capital + Reserves and Surplus}}{\text{No. of Units outstanding under the Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Direct Plan under the Scheme will have separate NAVs. Further, separate NAV will be calculated and disclosed for each plan/option.

The AMC will calculate the NAVs of the Scheme on daily basis. The valuation of the Schemes' assets and calculation of the Schemes' NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

There are no specific SEBI guidelines on valuation of foreign securities at present. In the absence of any guidelines, the following policy will be followed:

In case of investment in foreign securities, on the Valuation Day, the securities shall be valued in line with the valuation norms specified by SEBI for Indian equity/ debt securities. However, in case valuation for a specific equity/ debt security is not covered by SEBI (MF) Regulations, then the security will be valued on fair value basis.

Due to difference in time zones of different markets, in case the closing prices of securities are not available within a given time frame to enable the AMC to upload the NAVs for a Valuation Day, the AMC may use the last available traded price for the purpose of valuation. The use of the closing price / last available traded price for the purpose of valuation will also be based on the practice followed in a particular market. In case any particular security is not traded on the Valuation Day, the same shall be valued on a fair value basis by the Valuation Committee of the AMC.

On the Valuation Day, all assets and liabilities denominated in foreign currency will be valued in Indian Rupees at the Bid Rate of foreign currency Indian Rupees exchange rate available on Reuters at 5.00 p.m.

In case, the Reuters exchange rate is not available, then the following sources will be used for exchange rate in the order of priority:

- Exchange rate (Bid Rate) available on Bloomberg at 5.00 p.m. IST;
- Reference rate issued by Financial Benchmarks India Ltd. (FBIL) as at the close of banking hours on the relevant business day in India
- Any other publicly available source.

The Trustees reserve the right to change the source for determining the exchange rate.

The exchange gain / loss resulting from the aforesaid conversion shall be recognized as unrealized exchange gain / loss in the books of the Scheme on the day of valuation. Further, the exchange gain / loss resulting from the settlement of assets / liabilities denominated in foreign currency shall be recognized as realized exchange gain / loss in the books of the scheme on the settlement of such assets / liabilities.

F. STAMP DUTY

Pursuant to Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019 read with subsequent Notification No. S.O. 1226 (E) and G.S.R. 226(E) dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, a stamp duty @ 0.005% of the Transaction Value will be levied on applicable mutual fund transactions i.e. purchases (including switch-in, IDCW reinvestment etc.). Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchase, switch-in, installment of Systematic Investment Plan, Systematic Transfer Plan and reinvestment of IDCW to the unitholders will be lower to that extent. The stamp duty will be arrived at using inclusive method of calculation. For applying stamp duty, Transaction Value will be calculated after deducting transaction charges and such other charges as may be applicable from time to time. The calculation of stamp duty is explained as follows:

If an investor subscribes units for Rs.1,00,000/- through a distributor and transaction charges payable to distributor are Rs.100/-, then stamp duty will be calculated as follows:

Transaction Value = Subscription Amount - Transaction Charges (i.e. 1,00,000-100) = 99,900/-

Stamp Duty = (Transaction Value / 100.005) * 0.005
 = (99,900/100.005) * 0.005
 = 4.99

Accordingly, the amount of stamp duty of Rs. 4.99 will be deducted from the transaction value and for the balance amount, units will be allotted at applicable NAV.
