I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsor is not responsible or liable for any loss or shortfall resulting from the operations of the Scheme beyond the initial contribution of Rs. 1,50,000/- (Rupees One Lakh Fifty Thousand Only) made by it towards the corpus of the Mutual Fund.
- The present Scheme is not a guaranteed or assured return scheme.

Scheme Specific Risk Factors / Risk Mitigation Measures:

• **Risk associated with Equity and Equity Related Instruments:**

Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected.

Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities.

Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk, however, the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.

The Scheme would invest in the securities which are constituents of underlying Index in the same proportion as the securities have in the underlying Index. Hence, the risk associated with the corresponding underlying Index would be applicable to the Scheme.

Risk Mitigation Measures:

Type of Risk	Measures to mitigate risk
Volatility	The Scheme is a passively managed scheme and hence volatility risk will be lesser as compared to actively managed schemes.
Concentration	The Scheme will invest in securities which are constituents of underlying Index in the same proportion as the securities have in the underlying Index. Hence, concentration risk will be the same as that of underlying index, subject to tracking error.
Liquidity	The Scheme will invest in securities which are constituents of Nifty 50 in the same weightage as that of Index. As per data from NSE, constituents of Index have good liquidity in the market. Therefore, the Scheme does not envisage liquidity risk.

- **Risk associated with Fixed Income and Money Market Instruments:**

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However in case of Government securities since credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government securities, there is minimal credit risk to that extent.

Liquidity or Marketability Risk

This refers to the ease with which a security can be sold at or near to its valuation i.e. yield-to maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

- **Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement**

Clearing Corporation of India Ltd. ('CCIL') is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations.

The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSGGL account of the Member with RBI.

Invesco Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments.

To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses arising out of any default by its members from outright and

repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades.

In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss.

The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

- **Risks associated with investing in Derivatives**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

- **Risks associated with Securities Lending**

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn can not protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/issuer.

- **Risks associated with Short Selling**

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In addition, short selling also carries the risk of inability to borrow the security by the

participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

- **Passive Investments**

The Scheme is passively managed Scheme. The Scheme's performance may be affected by a general decline in the Indian markets relating to its underlying Index. The Scheme invests in securities which are constituents of its underlying Index regardless of its investment merit, research, without taking a view of the market and without adopting any defensive measures. The AMC does not attempt to individually select stocks or take defensive positions in declining markets.

- **Tracking Error Risk**

"Tracking Error" is defined as the standard deviation of the difference between daily returns of underlying Index and NAV of Units of the Scheme. The fund manager may not be able to invest corpus of the Scheme in securities exactly in the same proportion as in the underlying Index due to certain factors such as rounding off, fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying Index and regulatory policies which may affect AMC's ability to achieve close correlation with the Underlying Index. The Scheme's returns may therefore deviate from those of its Underlying Index.

Tracking Error may arise due to the following reasons: -

1. Recurring expenses of the Scheme.
2. The fund may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
3. Securities trading may halt temporarily due to circuit filter rules.
4. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
5. Rounding off of quantity of shares in underlying Index.
6. Dividend payout.
7. Changes to the constituents of underlying Index as a result of Index maintenance by NSE Indices. NSE Indices undertakes a periodical review of the scrips that comprise the underlying Index and may either include new scrip or exclude existing scrip.

The AMC will endeavor to keep the tracking error as low as possible. Under normal circumstances, the tracking error is not expected to exceed 2% p.a. This is only an estimate and may vary according to recurring expenses of the Scheme and other factors stated above.

- **Risk Factors associated with Trading of Units on Stock Exchange(s)**

- Although Units of the Scheme are listed on the Stock Exchange(s), there can be no assurance that an active secondary market will develop or be maintained.
- The Units of the Scheme may trade at a premium/discount to NAV. The NAV of the Scheme will fluctuate with changes in the market value of Scheme's holding. The trading prices of Units of the Scheme will fluctuate in accordance with changes in their NAV as well as demand and supply of the Units in the market(s). However, the Units of the Scheme can be subscribed / redeemed in Creation Unit size directly with the Fund which provides efficient arbitrage between the traded prices and the NAV thereby reducing the incidence of Units of the Scheme being traded at premium/discounts to NAV. However, any changes in the trading regulations by NSE/ Stock Exchange(s)/SEBI may affect the ability of the market makers/Authorized Participants to arbitrage resulting into wider premium or discount to NAV.
- Trading in Units of the Scheme on the Exchange may be halted because of market conditions or for reasons that in view of Exchange authorities or SEBI, trading in Units of the Scheme is not advisable. In addition, trading in Units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of Units of the Scheme will continue to be met or will remain unchanged.

- The Units will be issued in demat form through depositories. The records of the depository are final with respect to the number of Units available to the credit of Unit holder. Settlement of trades, repurchase of Units by the Mutual Fund will depend upon the confirmations to be received from depository(ies) on which the Mutual Fund has no control.

- **Redemption Risk**

Investors may note that even though this is an open-ended scheme, the Scheme would repurchase Units in Creation Unit size only. Thus, unit holdings less than the Creation Unit size can only be sold through the secondary market on the Stock Exchange where these units are listed, subject to the rules and regulations of the Exchange.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

As the Scheme is an Exchange Traded Scheme, the provisions of SEBI Circular No. SEBI/IMD/CIR No. 10/22701/03 dated December 12, 2003, with respect to minimum number of investors and no single investor shall account for more than 25% of the corpus of the Scheme do not apply.

However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

C. ASSET ALLOCATION PATTERN

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Instruments	Indicative Allocations (% of net assets)		Risk Profile
	Minimum	Maximum	High/Medium / Low
Securities covered by Nifty 50*	95	100	High
Debt and Money Market Instruments	0	5	Low to Medium

*Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions for a temporary period. The maximum derivative position will be restricted to 10% of the net assets of the Scheme.

The cumulative gross exposure through equity, debt, derivative positions, other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time should not exceed 100% of the net assets of the Scheme.

The Scheme may engage in short selling of securities in accordance with the framework relating to short selling and securities lending and borrowing specified by SEBI from time to time.

In addition to the instruments stated in the table above, the Scheme may enter into repos/reverse repos as may be permitted by RBI. From time to time, the Scheme may hold cash. A part of the net assets may be invested in the Triparty repo (TREPS) on Government securities or treasury bills or repo or in an alternative investment as may be provided by RBI to meet the liquidity requirements.

Pending deployment of the funds in securities in terms of investment objective of the Scheme, the AMC may park the funds of the Scheme in short term deposits of the Scheduled Commercial Banks, subject to the guidelines issued by SEBI vide its circular dated April 16, 2007, as may be amended from time to time.

Subject to the SEBI Regulations, the asset allocation pattern indicated above may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary substantially depending upon the perception of the fund manager the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and for defensive considerations only. The fund manager will restore asset allocation in line with the asset allocation pattern within 1 month.

D. WHERE WILL THE SCHEME INVEST?

- The Scheme will invest in securities which are constituents of Nifty 50 in the same proportion as in underlying Index. For list of constituents of Nifty 50, please refer Page 26.

- Equity Derivatives are financial instrument, generally traded on an exchange, the price of which is directly dependent upon (i.e. “derived from”) the value of equity shares or equity indices. Derivatives involve the trading of rights or obligations based on the underlying, but do not directly transfer property.

Futures are exchange-traded contracts to sell or buy financial instruments for future delivery at an agreed price. There is an agreement to buy or sell a specified quantity of financial instrument on a designated future date at a price agreed upon by the buyer and seller at the time of entering into a contract. To make trading possible, the exchange specifies certain standardized features of the contract. A futures contract involves an obligation on both the parties to fulfill the terms of the contract.

SEBI has permitted futures contracts on indices and individual stocks with maturity of 1 month, 2 months and 3 months on a rolling basis. The futures contracts are settled on last Thursday (or immediately preceding trading day if Thursday is a trading holiday) of each month. The final settlement price is the closing price of the underlying stock(s)/index. As per SEBI Circular No. SEBI/HO/MRD/DOPI/CIR/P/2018/161 dated December 31, 2018, stock derivatives are physically settled.

Option is a contract which provides the buyer of the option (also called holder) the right, without the obligation, to buy or sell a specified asset at the agreed price on or upto a particular date. For acquiring this privilege, the buyer pays premium (fee) to the seller. The seller on the other hand has the obligation to buy or sell specified asset at the agreed price and for this obligation he receives premium. The premium is determined considering number of factors such as the market price of the underlying asset/security, number of days to expiry, risk free rate of return, strike price of the option and the volatility of the underlying asset. Option contracts are of two types viz:

Call Option - The option that gives the buyer the right to buy specified quantity of the underlying asset at the strike price is a call option. The buyer of the call option (known as the holder of call option) can call upon the seller of the option (writer of the option) and buy from him the underlying asset at the agreed price at any time on or before the expiry of the option.

The seller (writer of the option) on the other hand has the obligation to sell the underlying asset if the buyer of the call option decides to exercise his option to buy.

Put Option - The right to sell is called put option. A Put option gives the holder (buyer) the right to sell specified quantity of the underlying asset at the strike price. The seller of the put option (one who is short Put) however, has the obligation to buy the underlying asset at the strike price if the buyer decides to exercise his option to sell.

There are two kind of options based on the date of exercise of right. The first is the European Option which can be exercised only on the maturity date. The second is the American Option which can be exercised on or before the maturity date.

W.e.f. December 31, 2010, all the options contracts in F&O Segment will have European Option only.

- The Scheme will invest in debt and money market instruments. These instruments may include certificate of deposits, commercial paper, cash management bills, treasury bills, Tri-party Repo, non-convertible debentures as well as bonds, floating rate debt instruments, repo* or reverse repo, bills rediscounting, securities created and issued by the Central and State Governments as may be permitted by RBI, securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills), debt derivative instruments etc.
- Debt derivative instruments:

Interest Rate Swap - An Interest Rate Swap (IRS) is a financial contract between two parties exchanging or swapping a stream of interest payments for a “notional principal” amount on multiple occasions during a specified period. Such contracts generally involve exchange of a “fixed to floating” or “floating to fixed

rate” of interest. Accordingly, on each payment date that occurs during the swap period, cash payments based on fixed/ floating and floating rates are made by the parties to one another.

Forward Rate Agreement - A Forward Rate Agreement (FRA) is a financial contract between two parties to exchange interest payments for a ‘notional principal’ amount on settlement date, for a specified period from start date to maturity date. Accordingly, on the settlement date, cash payments based on contract (fixed) and the settlement rate, are made by the parties to one another. The settlement rate is the agreed benchmark/ reference rate prevailing on the settlement date.

- Any other Scheme of Invesco Mutual Fund or of any other mutual fund. Such investment will be subject to limits specified under SEBI Regulations and AMC will not be entitled to charge management fees on such investments.
- Pending deployment of funds as per the investment objective of the Scheme, the funds may be parked in short term deposits of the Scheduled Commercial Banks, subject to guidelines and limits specified by SEBI.

* Presently in India G-Secs, State Government Securities, T-Bills and Corporate debt securities are eligible for Repo / Reverse Repo. Presently, the AMC does not intend to participate in repo in corporate debt securities. However, the AMC may participate in repo in corporate debt securities by ensuring necessary compliance with SEBI circular dated November 11, 2011 and November 15, 2012.

The securities / instruments mentioned above and such other securities the Scheme is permitted to invest in could be listed, unlisted, privately placed, secured, unsecured, rated or unrated and of any maturity. The securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offer, negotiated deals. Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the credit rating agency.

The Scheme may invest upto 5% of its net assets in unrated debt instruments subject to conditions that such investments can be made only in such instruments, including bills re-discounting, usance bills, etc., that are generally not rated and for which separate investment norms or limits are not provided in MF Regulations & various circulars issued thereunder. All such investments shall be made with the prior approval of the Board of AMC & Trustee.

SECURITIES LENDING

Securities lending means the lending of securities to approved intermediary for a fixed period of time, at a negotiated compensation in order to enhance returns of the portfolio. The securities lent will be returned by the approved intermediary on the expiry of stipulated period.

Subject to SEBI Regulations, the Scheme may engage in securities lending. Such lending shall be made when, in view of the fund manager, it could provide reasonable returns commensurate with risks associated with such lending and shall be made in accordance with the investment objective of the Scheme.

The Scheme may lend securities from its portfolio in accordance with the Regulations and applicable SEBI guidelines. Securities lending shall enable the Scheme to earn income in the form of lending fees that may partially offset its expenses and thereby reduce the effect expenses have on the Scheme’s ability to provide investment returns that correspond generally to the performance of its Benchmark Index. The Scheme will pay administrative and other expenses / fees in connection with the lending of securities. E. INVESTMENT STRATEGY

The Fund will follow a passive investment strategy and will invest in companies which are constituents of Nifty 50 in the same weights as in the Index with an endeavor to track the benchmark index with as low tracking error as possible. The Fund may, for a temporary period, take exposure to derivatives of the index or its constituent stocks when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions and when it makes economic benefit for the Fund. The Fund in order to meet liquidity and expense requirements may also invest in debt and money market instruments.

RISK CONTROL

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to VAR, tracking error etc. Further AMC has implemented Bloomberg Portfolio Management System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager calculate various risk ratios, average duration and analyze the same.

INVESTMENT IN DERIVATIVES

The Scheme may invest in various derivative instruments which are permissible under the applicable Regulations and shall also be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index).

Derivatives are financial contracts of pre-determined fixed duration, like stock futures/options and index futures and options, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities, and equities.

Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on stock exchanges whereas OTC derivative transactions are generally structured between two counterparties.

The risks associated with derivatives are similar to those associated with equity investments. The additional risks could be on account of

- Illiquidity;
- Potential mis - pricing of the Futures/Options;
- Inability of derivatives to correlate perfectly with the underlying (Indices, Assets, Exchange Rates)
- Cost of hedge can be higher than adverse impact of market movements;
- An exposure to derivatives in excess of the hedging requirements can lead to losses;
- An exposure to derivatives can also limit the profits from a genuine investment transaction.

Exchange traded derivative contracts in stocks are physical settled and indices in India are currently cash settled.

The Scheme will comply with all the applicable circulars issued by SEBI as regard to derivatives viz. SEBI Circular no. SEBI/MFD/CIR No. 03/ 158 /03 dated June 10, 2003, no. DNPD/Cir-29/2005 dated September 14, 2005, no. SEBI/IMD/CIR No. 9/108562/07 dated November 16, 2007, no. Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010.

Concepts and Examples

Futures

Futures (Index & Stocks) are forward contracts traded on the exchanges & have been introduced both by BSE and NSE. Currently futures of 1 month (*near month*), 2 months (*next month*) and 3 months (*far month*) are traded on these exchanges. These futures expire on the last working Thursday of the respective months.

Illustration with Index Futures

In case the Nifty spot is trading at say, Rs. 11,700, and the fund manager has a view that it will depreciate going forward; the Scheme can initiate a sell transaction of Nifty futures at Rs. 11,736 without holding a portfolio of equity stocks or any other underlying long equity position. Once the price falls to Rs. 11,500 after say, 20 days, the Scheme can initiate a square-up transaction by buying the said futures and book a profit of Rs. 236.

Correspondingly, if the fund manager has a positive view he can initiate a long position in the index / stock futures without an underlying cash/ cash equivalent subject to the extant regulations.

There are futures based on stock indices as mentioned above as also futures based on individual stocks. The profitability of index /stock future as compared to an individual security will inter-alia depend upon:

- The carrying cost,
- The interest available on surplus funds, and
- The transaction cost.

Example of a typical future trade and the associated costs:

Particulars	Index Future	Actual Purchase of Stocks
Index at the beginning of the month	11,700	11,700
Price of 1 Month Future	11,736	
A. Execution Cost: Carry and other index future costs	36	
B. Brokerage Costs: (0.05% of Index Future and 0.12% for spot stocks)	5.868	14.04
C. Gains on Surplus Funds: (Assumed 6.00% p.a. return on 85% of the money left after paying 15% margin) (6.00%*11700*85%*30days/365)	49.195	0
Total Cost (A+B-C)	-7.33	14.04

Few strategies that employ stock /index futures and their objectives:

(a) Arbitrage

(1) Buying spot and selling future: Where the stock of a company “A” is trading in the spot market at Rs. 100 while it trades at Rs. 102 in the futures market, then the Scheme may buy the stock at spot and sell in the futures market thereby earning Rs. 2.

Buying the stock in cash market and selling the futures results into a hedge where the Scheme has locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts when there is a convergence between the cash market and the futures market. This convergence enables the Scheme to generate the arbitrage return locked in earlier.

(2) Selling spot and buying future: In case the Scheme holds the stock of a company “A” at say Rs. 100 while in the futures market it trades at a discount to the spot price say at Rs. 98, then the Scheme may sell the stock and buy the futures.

On the date of expiry of the stock future, the Scheme may reverse the transactions (i.e. buying at spot & selling futures) and earn a risk-free Rs. 2 (2% absolute) on its holdings without any dilution of the view of the fund manager on the underlying stock.

Further, the Scheme can still benefit from any movement of the price in the upward direction, i.e. if on the date of expiry of the futures, the stock trades at Rs. 110 which would be the price of the futures too, the Scheme will have a benefit of Rs. 10 whereby the Scheme gets the 10% upside movement together with the 2% benefit on the arbitrage and thus getting a total return of 12%. The corresponding return in case of holding the stock would have been 10%.

Note: The same strategy can be replicated with a basket of Nifty-50 stocks (Synthetic NIFTY) and the Nifty future index.

(b) Buying/ Selling Stock future:

When the Scheme wants to initiate a long position in a stock whose spot price is at say, Rs.100 and futures is at 98, then the Scheme may just buy the futures contract instead of the spot thereby benefiting from a lower cost.

In case the Scheme has a bearish view on a stock which is trading in the spot market at Rs.98 and the futures market at say Rs. 100, the Scheme may subject to regulations, initiate a short position in the futures contract. In case the prices align with the view and the price depreciates to say Rs. 90, the Scheme can square up the short position thereby earning a profit of Rs.10 visa a vie a fall in stock price of Rs. 8.

(c) Hedging:

The Scheme may use exchange-traded derivatives to hedge the equity portfolio. Both index and stock futures and options may be used to hedge the stocks in the portfolio.

Risk associated with these strategies:

1. Lack of opportunities;
2. Inability of derivatives to correlate perfectly with the underlying security; and
3. Execution risk, whereby ultimate execution takes place at a different rate than those devised by the strategy.

Execution of these strategies depends upon the ability of the fund manager to identify and execute based on such opportunities. These involve significant uncertainties and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

PORTFOLIO TURNOVER

The Scheme is a passively managed Scheme and the Fund Manager will generally follow fully invested approach. The Scheme being an open ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis by Authorized Participants and Large Investors. Generally, portfolio turnover would depend upon rebalancing of the portfolio due to change in composition of underlying Index (as a result of maintenance of Index by NSE Indices) or due to corporate actions in the constituents of Nifty 50 Index. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio of the Scheme.

INVESTMENT BY THE AMC IN THE SCHEME

As mandated under the prevailing regulatory requirements, the AMC has invested in the Scheme and such investment will not be redeemed unless the Scheme is wound up.

In addition to above investments, the AMC may invest in the Scheme during the continuous offer period subject to the SEBI (MF) Regulations.

Calculation of transaction charge and balance subscription amount in case of subscription routed through distributor is explained as follows:

(In INR)

Subscription Amount (A)	For existing investors in a Mutual Fund		For first time investor in Mutual Funds	
	Transaction charge (B)	Balance Subscription Amount (A-B)	Transaction charge (C)	Balance Subscription Amount (A-C)
10,000	100	9,900	150	9,850
9,999	Nil	9,999	Nil	9,999
10,00,000	100	9,99,900	150	9,99,850

Note: Balance subscription amount will be invested and units will be allotted at applicable NAV per unit for the balance subscription amount.

F. STAMP DUTY

Pursuant to Part I of Chapter IV of Notification dated February 21, 2019 issued by Legislative Department, Ministry of Law and Justice, Government of India on the Finance Act, 2019 read with subsequent Notification No. S.O. 1226 (E) and G.S.R. 226(E) dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, a stamp duty @ 0.005% of the Transaction Value will be levied on applicable mutual fund transactions i.e. purchases (including switch-in, IDCW reinvestment etc.). Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchase, switch-in, installment of Systematic Investment Plan, Systematic Transfer Plan and reinvestment of IDCW to the unitholders will be lower to that extent. The stamp duty will be arrived at using inclusive method of calculation. For applying stamp duty, Transaction Value will be calculated after deducting transaction charges and such other charges as may be applicable from time to time. The calculation of stamp duty is explained as follows:

If an investor subscribes units for Rs.1,00,000/- through a distributor and transaction charges payable to distributor are Rs.100/-, then stamp duty will be calculated as follows:

Transaction Value = Subscription Amount - Transaction Charges (i.e. 1,00,000-100) = 99,900/-

Stamp Duty = (Transaction Value / 100.005) * 0.005
 = (99,900/100.005) * 0.005
 = 4.99

Accordingly, the amount of stamp duty of Rs. 4.99 will be deducted from the transaction value and for the balance amount, units will be allotted at applicable NAV.
