

Accessing Innovation in the US

Although equity indices finished modestly lower in February, volatility started to move back into the market as stocks traded near six-month highs at the beginning of the month. A shift in sentiment amongst investors started after the Federal Open Market Committee (FOMC) meeting and gained pace as economic data was reported and companies released their previous quarters' financial results. Overall, market action continued to be driven by messaging from the FOMC, inflation data and economic activity.

The FOMC held their first meeting of 2023 and announced a 0.25% increase to the target federal funds rate. The hike was a step down from the 0.50% hike in December. The FOMC has now decreased the size of the rate hikes in the previous two meetings, down from the 0.75% hike announced during the November 2022 meeting. Although the market expected the 25-basis point rate hike, equities extended the rally off of comments from Federal Reserve Chairman, Jerome Powell, delivered during his post-meeting press conference. Powell indicated that the disinflation process had started, which strengthened investors' thoughts that the potential for rate cuts in 2023 were still possible.

As the month progressed, new inflation readings across the globe caused investors to fear that the FOMC will have to continue the fight against inflation for longer than initially expected. The February Consumer Price Index (CPI) reading was released on the 14th and came in higher than expectations, 5.6% vs. 5.4%. There was also a rise in Fed's preferred measure of inflation, the Personal Consumption Expenditure Index (PCE). The month-over-month reading came in above expectations at 0.6% vs. 0.5%, while the year-over-year reading was reported at 5.4%, significantly higher than the 5.0% expectation.

Ultimately, the hawkish Fed speak caused investors to push back their expectations of when a rate cut will occur. According to Bloomberg, the expectation for a rate cut had been pushed to the beginning of 2024, which is later than the third quarter expectation seen at the end of January. Bloomberg also showed the target rate peaking in September at 5.4%.

Index performance

	1 Month	YTD	1 Year	10 Years (CAGR)
NASDAQ-100	-0.4%	10.2%	-14.9%	16.8%
S&P 500	-2.5%	3.6%	-8.2%	11.6%
Relative	2.1%	6.4%	-7.3%	4.7%

Nasdaq 100 Performance Drivers

February performance attribution of the Nasdaq 100 vs the S&P 500 Index

For the month of February, the Nasdaq 100 Index (NDX) returned -0.4%, outperforming the S&P 500 Index, which returned -2.5%. Information Technology, Consumer Discretionary and Consumer Staples were NDX's best performing sectors and returned 1.85%, -0.48% and -1.82%, respectively. The Utilities sector was the biggest detractor to performance with a return of -6.25%.

NDX's outperformance vs. the S&P 500 was largely driven by its overweight exposure and differentiated holdings in the Information Technology sector. NDX's overweight exposure and differentiated holdings to the Consumer Discretionary also contributed to relative performance. Underweight exposure to the Industrials sector along with lack of exposure to the Financials sector detracted from relative performance vs. the S&P 500.
