In line with para 12.24 of SEBI Master Circular on Mutual Funds dated June 27, 2024, the cumulative gross exposure through government securities, money market instruments, repos, mutual fund schemes, other permitted securities/assets and such other securities/assets as may be permitted by the SEBI from time to time, subject to regulatory approvals, if any, should not exceed 100% of the net assets of the scheme.

Cash and cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure. Point 67 of Policy Related emails issued by SEBI Master Circular dated June 27, 2024 has clarified that Cash Equivalent shall consist of Government Securities, T-Bills and Repo on Government Securities.

During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table. However, in case of maturity of security/securities in the Scheme portfolio, the

reinvestment will be in line with the index methodology.

The Scheme may enter into repos/reverse repos as may be permitted by SEBI / RBI and such investments will be restricted upto 5% of the net assets of the Scheme. From time to time, the Scheme may hold cash. A part of the net assets may be invested in the TREPS, repo or in an alternative investment as may be provided by RBI to meet the liquidity requirements.

As the index includes securities that shall mature during the six month period ending on the final maturity date of the index, any proceeds from the security redemption prior to the final maturity date of the index shall be re-invested using the following waterfall approach:

- The proceeds from security redemption will be reinvested in the longest maturity outstanding security issued by the same issuer (G-sec/T-Bill in case of government securities) and maturing on or just before the index maturity date with the same weightage.
- In case a replacement in the form of outstanding security of the same issuer cannot be found for reinvestment then the proceeds from such redemption shall be reinvested in the remaining portfolio on the same date in the proportion of the existing weights.
- In case due to any reason, it is not possible to meet any norms as prescribed by Para 3.5 of SEBI Master Circular dated June 27, 2024, then the proceeds from such redemption shall be reinvested in a T-Bill maturing on or just before the index maturity date
- If the last outstanding security (including T-Bill) in the index matures before the final index maturity date, all redemption proceeds shall be re-invested in The Clearing Corporation of India Ltd.'s (CCIL) TREPS overnight rate tracked by Nifty 1D Rate Index for any subsequent days till the maturity of the index

Change in Asset Allocation

The Scheme is a passively managed Scheme and accordingly in line with Para 3.5 of SEBI Master Circular dated June 27, 2024 the Scheme shall replicate the constituents of Index with the permissible deviation of either +/- 3 months or +/- 10% of Macaulay duration, whichever is higher. However, at no point of time, the residual maturity of any security forming part of the portfolio shall be beyond the target maturity date of the Scheme. Post any transactions undertaken in the Scheme portfolio, in order to meet the redemption and subscription obligations, it shall be ensured that replication of the portfolio with the index is maintained at all points of time, subject to permissible deviations.

Rebalancing due to Short Term Defensive Consideration:

Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for a short term and defensive considerations as per para 1.14.1.2.b of SEBI Master Circular dated June 27, 2024 and the fund manager will rebalance the portfolio within 7 calendar days from the date of deviation.

B. Where will the scheme invest?

1. The Scheme will invest in securities stated under the Asset Allocation Pattern.
2. Securities created and issued by the Central and State Governments as may be permitted by RBI
3. Tri-party Repo
4. Money Market instruments
5. Any other Liquid and Debt Mutual Fund Scheme.
6. Short term deposits of the Scheduled Commercial Banks. (Pending deployment of funds)
7. Any other securities as permitted by SEBI/RBI from time to time.

For details, refer Section II.

C. Investment Strategy

The Scheme is a Target Maturity Debt Index Fund and will be passively managed. The Scheme seeks to track the performance of Nifty G-sec Jul 2027 Index in line with the norms prescribed by Para 3.5 of SEBI Master Circular dated June 27, 2024. The Scheme will follow Buy & Hold investment strategy. During normal circumstances, the allocation to money market instruments will be in line with defined asset allocation pattern. However, in case of maturity of securities in the Scheme portfolio, the reinvestment will be in line with the index methodology.

Risk Control

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various risk measurement tools like but not limited to VAR, tracking error etc. Further AMC has implemented Bloomberg Asset and Investment Manager System as Front Office System (FOS) for managing risk. The system has inbuilt feature which enables the fund manager to calculate various risk ratios, average duration and analyze the same.

Portfolio Turnover

The Scheme is a passively managed Scheme and the Fund Manager will generally follow fully invested approach. The Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. The Fund Manager will endeavour to minimise portfolio turnover subject to the exigencies and needs of the Scheme. However, it is difficult to measure with reasonable accuracy the likely turnover in the portfolio of the Scheme.

D. Benchmark Index

Part III. OTHER DETAILS

A. Computation of NAV

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the principle of fair valuation as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) per unit of the Scheme shall be calculated by either of the following methods shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

Or

$$\text{NAV (Rs.)} = \frac{\text{Unit Capital + Reserves and Surplus}}{\text{No. of Units outstanding under the Scheme on the Valuation Day}}$$

Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

Particulars	Amount in Rs.
Market or Fair Value of Scheme's Investments(A)	10,00,00,000.00
Add: Current Assets including Accrued Income(B)	75,34,345.00
Less: Current Liabilities and Provisions(C)	(30,00,000.00)
Net Assets (A+B-C)	10,45,34,345.00

No. of Units outstanding under Scheme on the Valuation Day: 100,000.

The NAV per unit will be computed as follows: $10,45,34,345 / 100,000 = \text{Rs. } 1045.3435 \text{ p.u.}$ (rounded off to four decimals).

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Methodology for calculation of sale and re-purchase price of the units:

- **Ongoing price for subscription (purchase) / switch-in (from other schemes/plans of the mutual fund) by investors.**

The Purchase Price of Units is the price at which an investor can subscribe /purchase Units of the Scheme. During the continuous offer of the Scheme, the Units will be available at the Applicable NAV. Pursuant to para 10.4.1.a of SEBI Master Circular dated June 27, 2024, there is no entry load for purchase of Units of the Scheme. Accordingly, Purchase Price will be equal to Applicable NAV.

Example: The applicable NAV of the Scheme is Rs. 1100.00 p.u. Since Entry load is not applicable, the sale / subscription price will be calculated as follows:

$$\begin{aligned}\text{Sale / Subscription Price} &= \text{Applicable NAV} \times (1 + \text{Entry Load}) \\ &= \text{Rs. } 1100.00 \times (1 + 0) \\ &= \text{Rs. } 1100.00 \times 1 \\ &= \text{Rs. } 1100.00\end{aligned}$$

The investors should also note that stamp duty at the applicable rate will be levied on applicable transactions i.e. purchase, switch-in, IDCW reinvestment, instalment of Systematic Investment Plan, Systematic Transfer Plan. Accordingly, pursuant to levy of stamp duty, the number of units allotted will be lower to that extent. For more details & impact of stamp duty on number of units allotted, please refer **SAI**

- **Ongoing price for redemption (sale) / switch outs (to other schemes/plans of the Mutual Fund) by investors**

Ongoing price for redemption /switch out (to other schemes/plans of the Mutual Fund) is price which a Unit holder will receive for redemption/switch-outs. During the continuous offer of the Scheme, the Unit holder can redeem the units at applicable NAV, subject to payment of Exit Load, if any. It will be calculated as follows:

Redemption Price = Applicable NAV*(1-Exit Load, if any)

Example 1: The applicable NAV of the Scheme is Rs. 1100.00 p.u. If the applicable Exit Load at the time of investments is 1%, then the repurchase / redemption price will be calculated as follows:

$$\begin{aligned} &= \text{Rs. } 1100.00 * (1 - 0.01) \\ &= \text{Rs. } 1100.00 * 0.99 \\ &= \text{Rs. } 1089 \end{aligned}$$

Example 2: The applicable NAV of the Scheme is Rs. 1100.00 p.u. If the applicable Exit Load at the time of investment is Nil, then the repurchase / redemption price will be calculated as follows:

$$\begin{aligned} \text{Repurchase / Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 1100.00 * (1 - 0) \\ &= \text{Rs. } 1100.00 * 1 \\ &= \text{Rs. } 1100.00 \end{aligned}$$

Since the Scheme is not an equity scheme, Securities Transaction Tax (STT) is not applicable.

The Redemption / Repurchase Price will not be lower than 95% of the Applicable NAV.

(6A) (c), towards investment & advisory fees as specified under regulation 52(2) of the Regulations and/or towards recurring expenses as specified under 52(4) of the Regulations. **However, such additional expenses will not be charged if exit load is not levied / not applicable to the Scheme.**

The additional expenses on account of inflows from such cities charged will be credited back to the scheme in case the said inflows are redeemed within a period of one year from the date of investment.

The additional TER in terms of Regulation 52(6A)(b) of SEBI (Mutual Funds) Regulations, 1996 shall be charged upto 30 basis points on daily net assets of the scheme based on inflows only from retail investors beyond Top 30 cities (B 30 cities). The additional commission for B 30 cities shall be paid as trail only.

<https://www.invescomutualfund.com/literature-and-form?tab=Scheme>

B. Risk Factors

- **Scheme specific risk factors**

- **Passive Investments**

The Scheme is passively managed Scheme. The Scheme's performance may be affected by a general decline in the Indian markets relating to its underlying Index. The Scheme invests in securities which are constituents of its underlying Index regardless of its investment merit, research, without taking a view of the market and without adopting any defensive measures. The AMC does not attempt to individually select securities or take defensive positions in declining markets.

- **Risk associated with Fixed Income and Money Market Instruments**

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However in case of Government securities credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

Liquidity or Marketability Risk

This refers to the ease with which a security can be sold at or near to its valuation i.e. yield-to maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and offer price quoted by a dealer.

Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

While money market instruments are fairly liquid but lack a well developed secondary market, which may restrict the ability of the Scheme to sell such instruments.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

Settlement risk

The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Schemes' portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses to the Plan, in case of a subsequent decline in the value of securities held in the Schemes' portfolio.

Regulatory Risk

Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.

- **Tracking Error and Tracking Difference Risk:**

“Tracking Error” is defined as the annualized standard deviation of the difference in daily returns between the underlying Index and NAV of Scheme.

“Tracking Difference” is defined as the annualized difference of daily returns between the index and the NAV of Scheme.

The Fund Manager may not be able to invest the entire corpus of the Scheme in securities exactly in the same proportion as in the underlying Index due to certain factors such as rounding off, fees and expenses of the Scheme, changes to the underlying Index and regulatory policies which may affect AMC’s ability to achieve close correlation with the Underlying Index. The Scheme’s returns may therefore deviate from those of its Underlying Index.

Tracking Error / Tracking Difference may arise due to the following reasons:

- Recurring expenses of the Scheme.
- Any delay in the purchase or sale of securities due to non-availability of securities which are part of index.
- Due to timing of transactions either on RFQ platforms or in open market.
- Due to investment in out of index constituents or where available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise.
- Due to mismatch in the weight of the issuers forming part of the Index and the Scheme throughout life of the Scheme.
- Due to over-weight / under-weight investment in issuances which are part of the Index.
- Difference in valuation of underlying bonds by the Index Provider and AMC’s valuation providers.
- As permitted under the Asset Allocation pattern upto 5% of the Total Assets may be invested in money market instruments.
- The scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to liquidity and volatility in security prices. In such cases the Scheme may face higher impact cost while deploying/generating the cashflows.

The AMC will endeavor to keep the tracking error as low as possible. There can be no assurance or guarantee that the scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index.

The annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for the Scheme is higher than 1.25%, same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any.

- **Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement**

Clearing Corporation of India Ltd. (‘CCIL’) is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations.

The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSDL account of the Member with RBI.

Invesco Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally

through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments.

To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses arising out of any default by its members from outright and repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades.

In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss.

The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

- **Risks associated with segregated portfolio**

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security(ies) held in segregated portfolio may not realize any value.
- Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk Mitigation Strategies

Type of Risk	Risk Mitigation Measures
Volatility Risk	The Scheme is a passively managed scheme and hence volatility risk will be lesser as compared to actively managed schemes.
Interest Rate Risk	The Scheme is a passively managed scheme, is expected to follow a Buy and Hold investment strategy in a passive manner. All investments are within the maturity date of the Scheme and the Underlying Index. This should help mitigate the interest rate risk.
Liquidity Risk	The Scheme will invest in Government securities. In general, Government securities have a higher level of secondary market liquidity. Thus, the Scheme does not envisage liquidity risk.
Credit Risk	The Scheme will invest in Government securities. Thus, this risk is mitigated.

II. INFORMATION ABOUT THE SCHEME:

A. Where will the scheme invest

- The Scheme will invest in securities stated under the Asset Allocation Pattern.

The securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offers, negotiated deals. Further investments in debentures, bonds and other fixed income securities will be those instruments which have been assigned investment grade rating by the credit rating agency.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds, foreign portfolio investors and corporates.

The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz., Government Securities Market or G-Sec Market and Corporate Debt Market. The latter is further classified as Market for PSU Bonds and Private Sector Bonds. The Government Securities (G-Secs + T-bills) market, with market capitalization of Rs. 1,15,02,544.34 crores as on November 12, 2024 (Source: RBI), is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The outstanding dated securities of the Government of India is Rs. 1,07,61,608.34 Crores as on November 12, 2024 (Source - RBI). The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the government securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, Cash Management Bills etc. Apart from these instruments, there has been a significant demand in the STRIPS (Separate Trading of Registered Interest and Principal of Securities) of the Government Securities. Current outstanding amount of such STRIPS instruments is Rs. 6,95,069.79 Cr as on November 21, 2024 (Source - RBI). State Government Securities (SGS) through which State Governments borrow to fund their fiscal deficit has also become of a prominent size with outstanding amount of Rs. 58,48,908.32 Cr as on November 13, 2024 (Source – RBI) The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market,

is only an insignificant part of the Indian debt market. However, recently there was a significant increase in corporate bond issuances, particularly since it is at a more attractive rate than bank financing. The total traded volume in corporate bonds during April 2023 - March 2024 was Rs. 13,73,394.02 Crores vis-à-vis Rs. 13,57,109.98 Crores during April 2022 - March 2023 (Source: SEBI). A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

In money market, activity levels of the Government and non-government debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri-party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government Securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Though not strictly classified as money market instruments, PSU / PFI /Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The following table gives approximate yields prevailing on November 21, 2024 on some of the instruments. These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy.
