SCHEME BENCHMARK

As per AMFI
Tier 1 Benchmark i.e.
**NIFTY G-sec
Sep 2032 Index**

What are Target Maturity Debt Index Funds?

Target Maturity Debt Index Funds are open ended passively managed fixed income schemes. These funds aim to replicate the underlying benchmark index and mature on a fixed date. Investments are made in debt instruments such as Government securities, SDLs (State Development Loans), Corporate bonds etc. The underlying security in portfolio matures on or before the maturity of the scheme.

Why invest now?

- MPC in its February policy has delivered its first rate cut of 25 bps after almost 5 years as domestic growth-inflation dynamics turns favorable, in line with market expectations.
- New MPC's has adopted more flexible approach to the inflation trajectory under the inflation targeting framework as against the specific 4% target provides room for further rate cuts, even as the MPC remains data dependent.
- The longer yield of the curve is expected to flatten with long end yields coming lower on robust demand from investors like insurance companies, National Pension System (NPS), Employee Provident Fund Organization (EPFO) in last quarter of a financial year.
- A duration play which can help investors to benefit from potential capital gain opportunities in an easing interest rate scenario.
- An ideal investment option for conservative investors as the underlying securities (G-Secs) of the fund carry practically zero risk of default.
