

Investment Objective

The investment objective of the portfolio is to achieve capital appreciation over a long term by investing in a diversified portfolio.

Key Facts

Portfolio Manager & Experience

Mr. Siddharth Bothra

Total Experience: 25Y

Managing this portfolio since March 06, 2026

Investment Approach Inception Date

June 26, 2006

Investment Universe

Equity & Equity Related Instruments (Including Equity Derivatives)[#], Money Market Instruments, Units of Liquid, Money Market & Overnight Mutual Fund Schemes, Cash & Cash Equivalents

Indicative Asset Allocation

Instruments **% Allocations**

Equity & Equity Related Instruments 90% to 100%

(Including Equity Derivatives)[#]

Money Market Instruments, Units of 0% to 10%

Liquid, Money Market & Overnight

Mutual Fund Schemes, Cash & Cash

Equivalents

[#] The portfolio may have exposure to derivatives up to 30% of the portfolio value in accordance with guidelines issued by SEBI. The asset allocation pattern indicated above may change from time to time, keeping in view market conditions. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of market conditions of the Portfolio Manager, the intention being at all times to seek to protect the interests of the Client. Such changes in the asset allocation pattern will be for defensive considerations.

Strategy: Equity

Benchmark & Rationale

BSE 500 TRI

BSE 500 TRI benchmark includes the top 500 companies in the listed space in India and is a broad representation of the listed companies in India, across sectors and market capitalization range; an appropriate representative of the universe of stocks that the portfolio endeavors to invest in.

Investment Horizon

The portfolio is suitable for investors seeking longterm wealth creation by investing in equities with an investment horizon of 5 years and above.

Risk Factors

The portfolio invests in relatively smaller companies commonly referred to as mid cap and small cap stocks. These companies may lack operational strength, which may make them vulnerable during weaker economic cycles. Additionally, stocks of these companies usually have lower trading volumes on the exchanges, which may result into higher impact costs & longer execution time compared to large cap stocks. These companies tend to be less researched compared to large cap stocks & this may result into longer waiting period for the stock to reach their potential intrinsic value.

Subscription

Minimum Investment: ₹50 Lacs

Mode: Funds and/or Stock Transfer

Investment Strategy

The Portfolio shall invest in mid and small cap stocks that can get re-rated either because of growth in earnings, change in business environment or companies that may have been overlooked or are out of favour. While selecting stocks, the portfolio would prefer companies which exhibit scalable business model coupled with sustainable growth prospects and companies operating in niche or emerging business areas. For shortlisting opportunities, the portfolio would screen companies with good quality management, sound corporate governance, competitive advantages, attractive returns on capital employed, adequate cash flow, potential for earning growth and P/E multiple expansion. The portfolio would filter manufacturing companies based on Return on Capital Employed & Free Cash Flow and Financial Companies on the basis of Return of Equity & Return on Assets. The portfolio follows a bottom-up stock selection approach and would normally invest in 15 - 25 stocks, with no single stock having more than 12% exposure of the portfolio value and no single sector having more than 40% exposure of the portfolio value at time of investment.
