Invesco India Midcap Fund Stock Selection

Process Driven

Midcap stock picking strategy is a sub-set of the overall Equity Investment Process at Invesco Asset Management India

Invesco India Midcap Fund

Investment strategy & portfolio construction guidelines

- The fund is managed with growth bias and uses a bottom up stock picking approach with a top down overlay
- Identifies companies with stable business models which are likely to be winners over a long-term horizon and hence potential wealth creators.
- The Fund tends to invest in scalable / niche businesses with attractive return ratios, strong cash flows with healthy Balance sheet position.
- Fund invests in companies with credible promoter/management pedigree, who can take the company to the next level.
- At a portfolio construction level, we run a reasonably concentrated portfolio which is significantly different from the benchmark.
- Allocation towards relatively attractive companies with consistent growth orientation.
- Takes active overweight position in the portfolio.
- No of holdings: 40-60 stocks¹

¹Based on our current views on equity market, the number of stocks may change from time to time

Key themes currently running in the portfolio

- Portfolio construction is a function of both top-down theme selection and bottoms up stock selection.
- Some of the larger themes we are playing in the portfolio include retailing, healthcare services (includes hospitals, CDMO), financialization (exchanges, AMC, insurance, NBFC), quick commerce, real estate & ancillary, travel & leisure (airlines), etc.
- Consumer discretionary, healthcare and financials are our preferred sectors flowing from the above themes.
- Capex front we have not seen much pickup on the private capex and the state government capex. Central Government Capex is doing the bulk of the heavy lifting but there is a limit to it due to financial constraints. Hence, on the whole we are underweight this theme on the back of growth slowdown
- Credible challengers are emerging from the small and midcap segments in traditional sectors like consumption and finance. The fund endeavors to reflect the same in its portfolio positions.
- At an aggregate level, the fund strikes a good balance between traditional sectors and new-age opportunities.

To conclude

- Mid caps offer higher growth than large caps and at the same time the risk involved with mid caps has come down due to larger size of these companies hence they offer good risk reward at an overall level for long term investment. Mid caps today should be seen as smaller larger caps due to much larger size
- Even though overall valuations are expensive, but they offer higher earnings compounding. Around 49%¹ of midcaps continue to trade at discount v/s pre-covid levels and below their 5-year average multiples
- Midcaps earning momentum has improved after a dismal performance in FY25
- Stock picking is a key attribute for long term wealth creation
- Our bottom-up stock picking strategy is well suited to capitalize on this opportunity. And we continue to focus on quality and the earnings growth of the companies

Source: Bloomberg. ¹The above data is for the purpose of explaining there are midcap stocks which continue to trade below 5 years average We have consider BSE 150 MidCap stocks for above analysis. Only 129 stocks out of 150 stocks have been consider where PE data is available for past 5 years since January 15, 2021. Data as at 12 January 2026.
