The fund seeks to generate long term capital appreciation by investing in equity & equity related instruments of midcap companies. The fund utilizes the bottom up investment approach to select stocks and will be benchmark agnostic.

Invesco India Smallcap Fund

The fund will predominantly invest in smallcap companies with a view to generate capital appreciation over the long term. The fund will have a diversified portfolio of smallcap companies which will be selected based on bottom up investment approach. In addition, the stock selection of the fund will be guided by our internal proprietary stock categorization framework, which enables the fund management team in filtering the stock universe to identify the best investment opportunities.

Invesco India Focused Fund

The Scheme seeks to generate capital appreciation from a concentrated portfolio of upto 20 stocks, which may result in higher risk. The Scheme will adopt a multi-cap investment approach with a flexibility to invest across large, mid and small cap companies. The stock selection will be guided by our investment philosophy and proprietary stock categorization framework. Our process driven approach and categorization framework will assist us in filtering the high conviction investment ideas and contain the downside risk. The Scheme will adopt a fully invested approach comprising of both growth and value stocks.

Invesco India ESG Integration Strategy Fund

The Scheme will be actively managed. The Scheme will primarily invest in equity securities of companies which are selected based on Environmental, Social and Governance (ESG) criteria as defined by our proprietary investment framework. The stock selection will be guided by our ESG framework as defined under the heading 'Investment Process' as defined in the SID. At all times, on an aggregate basis, the Scheme intends to have the maximum permissible portfolio weighted average ESG risk score of less than or equal to 1.50. The Scheme will primarily invest in largecap stocks and will limit exposure to midcap & smallcap stocks upto 35% allocation of overall portfolio. The Scheme will follow blend of growth and value style and will have approximately 30 - 40 holdings.

Invesco India Financial Services Fund

The fund invests primarily in Equity and Equity Related instruments of companies in banking and financial services. The fund may invest in Banks, Non-Banking Financial Services Companies, Insurance companies, Asset Management companies, Rating agencies, Broking companies, Microfinance companies, Housing Finance Companies, Wealth Management Companies etc. The list is only indicative and not exhaustive, and the fund may invest in other financial services companies as well. The fund will combine top down and bottom up approach to construct the portfolio.

Invesco India Infrastructure Fund

The fund will invest primarily in Equity and Equity Related Instruments of companies in the infrastructure sector. It selects stocks utilizing bottom-up approach.

Infrastructure sector means companies engaged directly or indirectly in infrastructure development & growth of Indian economy. Same can be listed as follows: Banks, Financial Institutions & Term lending Institutions, Airports, Cement & Cement Products, Construction & construction related industries, Electrical & Electronic components, Engineering, Energy, Capital Goods & Products, Metals & Minerals, Ports, Power and Power equipment, Road & Railway initiatives, Telecommunication, Transportation, Infrastructure including Housing & Commercial Infrastructure, Oil and Oil Related Sectors, Earth Moving Equipment, Real estate, Any other sector directly or indirectly related to infrastructure creation/development in the economy. Please note that above list is only indicative and not exhaustive and can undergo changes based on future reforms and developments.

Invesco India PSU Equity Fund

The fund seeks to generate capital appreciation by investing in Equity and Equity Related Instruments of companies where the Central / State Government(s) has majority shareholding or management control or has powers to appoint majority of directors.

The Fund Manager will select stocks utilizing the bottom-up approach. In addition, he will also take a top down approach to manage risk. The Fund Manager may continue to hold companies in the Scheme which subsequently may get privatized or where the Government shareholding gets reduced through the process of disinvestment. The portfolio of the Scheme will be reviewed and rebalanced on an ongoing basis.

The Fund house, to select stocks, uses a proprietary stock categorization system for all its schemes. The objective of the system is to enable us to identify stocks that are likely to be the best investments within our universe. Each category of stock has a description of fundamental attributes that we expect the company to possess. However, for Invesco India PSU Equity Fund, the fund manager may select stocks outside of the stock categorization system in order to reflect the mandate of the fund to own only public sector companies.

Invesco India Arbitrage Fund

The Fund Manager would identify arbitrage opportunities and execute the deals simultaneously in both the markets. In terms of the SEBI guidelines, the Scheme shall not short sell in the cash market at all times.

The debt component of the Scheme would be invested in debt securities and money market instruments. The duration of the debt portfolio would primarily be managed with a view to generate income with minimum interest rate risk.

Some of the arbitrage strategies that may be adopted by the fund manager from time to time include:

Cash-Future Arbitrage: Arbitrage captures the spread, between the price of a stock in the spot market and in the futures market on a market neutral basis. If the price of a stock in the futures market is higher than in the spot market, after adjusting for taxes and other costs the Scheme may buy the stock in the spot market and sell the same stock in equal quantity in the futures market simultaneously. This enables the fund to earn the cost of carry between the stock and the futures of the stock.

If the futures are quoting at a discount to the price in the cash market before the expiry the trade may be reversed by buying the futures and selling the shares in the cash market which, will enhance the profit potential to the extent of discount between future as compared to cash market.

Normally the price between cash and future segment tend to converge on the expiry day. The cash and future trade would be reversed on the expiry day to book the locked arbitrage profit.

Rolling over of the futures transaction

Rolling over of the futures transaction means:

- 1) Unwinding the short position in the futures and simultaneously selling futures of a subsequent month; and
- 2) Holding onto the spot position.

There could also be instances of unwinding both the spot and the future position before the expiry of the current month future if it proves advantageous or to meet redemption.

Dividend Arbitrage: Usually during the period prior to IDCW declaration, the stock futures/options market can provide a profitable opportunity. Generally, the stock price declines by the IDCW amount when the stock goes ex-IDCW.

Buy-back Arbitrage: When the company announces the buy-back of its own shares, there could be opportunities due to the price differential in buy-back price and traded price.

Nifty Spot - Nifty Futures: The pricing of Nifty Futures is derived from the Nifty. When the two go out of sync, there arises opportunities. The cost of carry binds the futures price to the price of the underlying asset.

For instance, the price of the Nifty futures at any given point in time should typically be more than the level of Nifty at that point of time. Cash and carry trades at times provide higher return than the prevailing interest rates. There is an opportunity to exploit by buying the index futures and selling the portfolio comprising of index stocks. The cash received upon the sale is reinvested at the risk free rate of return till the expiration of the futures contract. The arbitrage profits come in at the expiration of the futures contract when the position is unwound by buying back the index stocks, or until expiry if the rates converge.

The same strategy can be replicated with stock futures also.

Buy Option: The options component would be actively managed in an attempt to take advantage of the volatility in the markets to enhance returns. The risk of investing in options is that the views of the portfolio manager may not materialize and the entire option premium paid could be lost.

The scheme would also look at investment in the equities market including subscribing to IPOs.

The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day-to-day basis. There are various possible combinations of strategies which may be adopted in a specific situation. The Fund Manager may apply such other arbitrage strategies as may be available/permissible under regulations from time to time.

Invesco India Balanced Advantage Fund

The fund is designed to dynamically change its allocation across equity, cash, debt and derivatives based on the prevailing market conditions. The Fund Manager will increase the exposure to equity when market valuations are attractive and will prune down the equity exposure by increasing cash or debt exposure and/or hedging when equity markets get expensive or experience volatility. The allocation to equity is guided by a proprietary 'asset-allocation' model which combines Equity Market Price to Earning (PE) along with Equity Risk Premium to arrive at a precise allocation to equity.

Invesco India Aggressive Hybrid Fund

The Scheme will invest in both equity & debt securities and accordingly will increase / decrease exposure based on the market outlook. Exposure to equity instruments would be in the range of 65% to 80% and the remaining portfolio will be invested in fixed income instruments. The Scheme's investment in equity will be directed towards generating capital appreciation, while investments in debt securities will provide stable returns thereby reducing the volatility of the portfolio. The Scheme will also tactically take advantage of opportunities by exploiting the price differential between cash and derivatives markets. The Scheme will adopt a combination of bottom-up and top-down approach to select stocks. The fixed income securities selection will be based on top-down approach, interest rates view and yield curve movements.

Invesco India Equity Savings Fund

The Scheme will invest in both equity and debt securities, employing a unique combination of three investment strategies- pure equity (net long equity), arbitrage and debt. The net long equity exposure is aimed to generate capital appreciation, while arbitrage opportunities and allocation to debt securities will be directed towards providing income and generate stable returns.

The Scheme will take advantage of arbitrage opportunities by exploiting the price differential between cash and derivatives markets. To select stocks, the Scheme will adopt a combination of bottom-up and top-down approach. In addition, the fund manager may also utilize the internal model for deciding equity allocation. The fixed income securities selection will be based on top-down approach, interest rates view and yield curve movements. The Scheme will actively use arbitrage opportunities to hedge the portfolio and generate low volatility returns.

Invesco India Flexi Cap Fund

The Scheme will invest in equity and equity related securities of large, mid and small companies. The Scheme will adopt bottom-up approach to identify the stock opportunities across the market capitalization. The Scheme will follow style neutral strategy and will be sector agnostic. The stock selection will be guided by our investment philosophy and proprietary stock categorization framework.

Invesco India Manufacturing Fund

The Scheme will invest primarily in equity & equity related instruments of companies following manufacturing theme. The Scheme will pursue active investment strategy, utilizing the bottom up investment approach to select stocks using its proprietary investment process. The Scheme will invest across market capitalization with an aim to have a well-diversified portfolio.

Following businesses can be part of manufacturing theme:

- Companies engaged in manufacturing and derive revenue from investment in plant and machinery
- Companies that can benefit from government's focus on making India a 'Global Manufacturing Hub'
- Companies investing in new manufacturing plants or undertaking capacity expansion
- Companies involved in provision of services/supplies to manufacturing companies such as IT hardware, network infrastructure, data solutions, logistics etc.

These companies can include companies which carry out manufacturing either by themselves or through third party processing/manufacturing units. The investment universe of the Scheme will comprise of eligible sectors and companies/sectors defined by the index provider.

Invesco India Technology Fund

The Scheme seeks to generate capital appreciation by investing in equity and equity-related instruments of technology-centric and technology-dependent companies both within India and internationally. The fund manager will adopt a combination of top-down and bottom-up approaches to identify companies with high growth potential in the realms of technology development & application and focus on companies spearheading transformative innovations in fields such as technology, automation, robotics, artificial intelligence, cloud computing, and other sectors, including those benefiting from increased digital adoption.

The indicative list of businesses within the technology sector includes IT services, engineering research & development firms, consulting and outsourcing companies, IT hardware and/or software entities, e-commerce, technology platforms, IT infrastructure providers like data centers, digital infrastructure providers, leased line providers, fintech companies, internet companies, digital service providers, electronics, telecom and telecom-related services, semi-conductors, networking companies, media and media infrastructure, biotechnology and data solutions providers etc.

Invesco India Business Cycle Fund

The Scheme will aim to provide long-term capital appreciation by investing predominantly in equity and equity related securities with focus on riding business cycles through dynamic allocation between various sectors and stocks at different stages of business cycles. The Scheme will follow an active investment strategy with an aim to be well diversified across industries, sectors and market capitalization.

A business cycle is basically defined in terms of periods of expansion and contraction. Each business cycle comprising of upcycle and downcycle typically has 4 phases (1) expansion - rising growth (2) peak - growth stabilizes at a high level (3) contraction - declining /slowing growth (4) trough - phase of weak/no growth.

The fund manager will consider various economic parameters (like corporate profit growth trend, GDP growth, Current Account Deficit, fiscal deficit, interest rates, inflation etc.), investment indicators (like investment in capex, capacity utilization, credit growth, etc.), business and consumer sentiment which are leading economic indicators (purchasing manager index, business confidence index, sales of various consumer discretionary products, etc.) in addition to other parameters to decide the phase of business cycle.

The relative performance of equity market sectors typically tends to rotate as the overall economy shifts from one stage of the business cycle to the next, with different sectors assuming performance leadership in different economic phases.

The Scheme aims to identify economic trends and investing in the sectors & stocks that are likely to outperform at any given stage of business cycle in the economy.

While constructing the portfolio, the Scheme would follow top-down approach for identifying the stage of business cycle and sector opportunities. Subsequently, through bottom-up approach Scheme endeavors to identify strong companies within the sectors identified.

Invesco India Multi Asset Allocation Fund

The Scheme endeavours to provide capital appreciation/income through investments in multiple asset classes such as Equity & Equity related securities, Debt & Money Market Instruments and Gold/Silver ETFs. The Scheme's asset allocation would be actively managed with an aim to create a diversified portfolio of multi asset-classes thereby balancing risk & reward. The asset allocation would take into consideration top-down global and domestic macro view, market valuations, inflation, liquidity, central bank policies, risk-premia, cross asset price information etc. The top-down macro view will be guided by our internal research, including third party research, and will form basis of inputs into our asset allocation framework. The signals derived from the asset allocation framework are overlaid with the assessment of the fund management team to determine the optimum asset allocation at a given point.

The Scheme's investment in domestic equity will be through investments in equity securities, equity derivatives as well as equity index funds and equity ETFs. The Scheme will invest in foreign securities (including overseas ETFs and index funds) in order to diversify the portfolio holdings. This can help the Scheme to benefit from the regions other than India that are experiencing strong economic growth or have undervalued assets. The Scheme may use derivatives for purposes as may be permitted from time to time.

The Scheme will invest in debt and money market instruments to generate income. The fixed income securities selection will be based on top-down approach, interest rates view and yield curve movements. The debt portfolio would be invested primarily in government securities and high credit quality instruments.

The exposure to Gold/Silver ETFs would be made based on the fundamentals, price corrections or other event-based opportunities in the market.

Invesco India Consumption Fund

The Scheme seeks to generate long-term capital appreciation by investing predominantly in equity and equity related instruments of companies benefitting from consumption theme. The Scheme will pursue active investment strategy and will select the stocks utilizing a combination of both top down and bottom-up investment approach. The Scheme will invest across market capitalization with an aim to have a well-diversified portfolio. The Scheme would identify companies/sectors that will benefit from rising consumption, increase in digital adoption thereby aiding consumption, increase in discretionary spends, changing demographics & lifestyles, increasing preference for premium/luxury products & services, urbanization, etc. The consumption patterns are fast evolving and present broad-based opportunities. The Scheme aims to capture the same by investing in domestic and overseas securities as stated in the asset allocation table.

The above list is only indicative, and the Scheme will explore to invest in new and emerging areas of companies engaged in consumption theme from Sector list provided by AMFI/SEBI/NSE/benchmark.

2. Risk Profile of the Scheme

Scheme Specific Risk Factor

Invesco India ELSS Tax Saver Fund

By virtue of requirements under the ELSS, Units issued under the Scheme cannot be assigned/transferred/pledged/switched-out/redeemed until the completion of three years from the date of their allotment. The ability of an investor to realise returns on investments in the Scheme is consequently restricted for the first three years. Redemption will be made prior to the expiry of the aforesaid three year period only in the event of the death of a Unit holder, subject to the Units having been held for a period of one year from the date of their allotment.

Invesco India Large & Mid Cap Fund

The mid cap stocks carry higher liquidity risk as they are less extensively researched compared to large cap stocks. This may lead to abnormal illiquidity and consequent higher impact cost.

Invesco India Contra Fund

Since the Scheme has a contrarian style of investment, it might underperform the markets in scenarios of strong upward or downward cycles. The Scheme seeks to generate returns out of identifying themes and market segments that are likely to outperform in the future. This may or may not happen.

Invesco India Midcap Fund

The mid cap stocks carry higher liquidity risk as they are less extensively researched compared to large cap stocks. This may lead to abnormal illiquidity and consequent higher impact cost.

Invesco India Smallcap Fund

The Smallcap stocks carry higher liquidity risk as they are less extensively researched compared to large cap stocks and mid cap stocks. This may lead to abnormal illiquidity and consequent higher impact cost.

Invesco India Focused Fund

- **Concentration Risk:**

The scheme is expected to run a significantly concentrated strategy comprising of a maximum of 20 stocks. This will likely mean stock weights on average being materially higher than underlying benchmark weights. This may lead to higher volatility in scheme's performance and divergence of portfolio performance vis-à-vis the benchmark over different periods. The scheme structure may also differ on sector exposures compared to those in the benchmark.

Invesco India ESG Integration Strategy Fund

Investing in a thematic fund is based on the premise that the Scheme will seek to invest in companies belonging to only specific theme. The Scheme being theme specific will be affected by the risks associated with companies based on environment friendly, socially responsible and sound corporate governance practices and hence concentration risk is expected to be high. Stocks of companies which are filtered on the basis of ESG parameters may shift into and out of favor with stock market investors depending on market and economic conditions and the Scheme's performance may at times be better or worse than the performance of schemes that do not follow ESG theme.

Invesco India Financial Services Fund

The Scheme being sector specific will be affected by the risks associated with the Financial Services sector.

Invesco India Infrastructure Fund

The investments under the Scheme are oriented towards equity/equity related instruments of infrastructure companies belonging to the infrastructure industries and hence will be affected by risks associated with the infrastructure sector/ industries. The performance of the companies which form the investment universe of this Scheme would be affected by the growth and performance of the infrastructure sector in the country.

Invesco India PSU Equity Fund

In line with the investment objective, the Scheme will invest only in equity and equity related instruments of PSU companies and hence, the Scheme will be affected by the policy of the government with respect to PSU companies.

Invesco India Arbitrage Fund

The primary objective of the Scheme is to identify investment opportunities and to exploit price discrepancies in various markets. Identification and exploitation of the strategies to be pursued by the fund manager involve uncertainty. No assurance can be given that fund manager will be able to locate investment opportunities or to correctly exploit price discrepancies in the capital markets. Reduction in mis-pricing opportunities between the cash market and future and options market may lead to lower level of activity affecting the returns. As the Scheme proposes to execute arbitrage transactions in various markets simultaneously, this may result in high portfolio turnover and consequently high transaction cost.

Invesco India Manufacturing Fund

Investing in a thematic fund is based on the premise that the Scheme will seek to invest in companies belonging to only specific theme. In line with the investment objective, the Scheme will invest only in Equity and Equity Related Instruments of companies following manufacturing theme. The Scheme will be affected by risks associated with the manufacturing companies and hence concentration risk is expected to be high. The performance of the companies which form the investment universe of this Scheme would be affected by the growth and performance of the manufacturing sector in the country.

Invesco India Technology Fund

Investing in a sectoral fund is based on the premise that the Scheme will seek to invest in companies belonging to only specific theme/ sector. In line with the investment objective, the Scheme will seek to invest in equity and equity related instruments of technology companies belonging to the technology industries and hence will be affected by risks associated with the technology sector / industries and hence concentration risk is expected to be high. The performance of the companies which form the investment universe of this Scheme would be affected by the growth and performance of the technology sector in the country.

Invesco India Business Cycle Fund

Investing in a thematic fund is based on the premise that the Scheme will seek to invest in companies belonging to specific theme. In line with the investment objective, the Scheme will seek to invest predominantly in equity and equity related securities with a focus on riding business cycles through dynamic allocation between various sectors and stocks at different stages of business cycles in the economy.

This will limit the capability of the scheme to invest in other companies/themes, hence will be affected by the risks associated with the business cycle theme. Also, as with all equity investing, there is a risk that companies in that specific sector / theme will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, both of which may adversely affect investment results. Thus, investing in a thematic fund may result in higher volatility and risk.

Invesco India Multi Asset Allocation Fund

The Scheme would be investing in Equity & Equity related Securities, Debt & Money Market Instruments, Gold ETF / Silver ETF and such other asset classes permitted by SEBI time to time. The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. Different asset class carry different types of risk as mentioned in the Scheme Information Document. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern as mentioned in the Asset Allocation section of Scheme Information Documents.

Invesco India Consumption Fund

Investing in a thematic fund is based on the premise that the Scheme will invest in companies belonging to only specific theme. In line with the investment objective, the Scheme will invest predominantly in equity and equity related instruments that are benefitting from consumption theme. This will limit the capability of the scheme to invest in other companies/themes, hence will be affected by the risks associated with the consumption theme. Also, as with all equity investing, there is a risk that companies in that specific sector / theme will not achieve its expected earnings results, or that an unexpected change in the market or within the company will occur, both of which may adversely affect investment results. Thus, investing in a thematic fund may result in higher volatility and risk.

Applicable to all Schemes

Risks associated with investing in Equity & Equity Related Instruments:

- Equity and equity related instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of equity and equity related instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic factors, general decline in the Indian markets or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected. Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities, including debt securities.
- Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk, however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio. Further, the volatility of medium/ small - capitalization stocks may be higher in comparison to liquid large capitalisation stocks.

Risks associated with investing in Fixed Income & Money Market Instruments

In addition to the factors that affect value of securities, the NAV of the Units of the Scheme will fluctuate with the movement in the broader fixed income, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in fixed income markets, changes in tax laws, currency exchange rates, foreign investments, political, economic or other developments. Further, the investments made by the Scheme will also be affected by interest rate / price risk, credit risk or default risk, liquidity risk, reinvestment risk, settlement risk, risk associated with investments in derivatives.

Risk associated with Fixed Income and Money Market Instruments: (Applicable only to Invesco India Business Cycle Fund, Invesco India Multi-Asset Allocation Fund and Invesco India Consumption Fund)

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However, in case of Government securities credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.

In case of floating rate instruments, an additional risk could arise because of changes in spreads of floating rate instruments. With increase in spread of floating rate instruments, the price can fall and with decrease in spread of floating rate instruments, the prices can rise. Moreover, the floating rate instruments having a periodical interest rate reset carry lower interest rate risk compared to a fixed rate debt security. However, in the falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.

Credit Risk

Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government Securities, there is minimal credit risk to that extent.

Lower rated or unrated securities are more likely to react to developments affecting the market and credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

Liquidity or Marketability Risk

The ability of the Scheme to execute sale/purchase order is dependent on the liquidity or marketability. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The securities that are listed on the stock exchange carry lower liquidity risk, but the ability to sell these securities is limited by the overall trading volumes. Further, different segments of Indian financial markets have different settlement cycles and may be extended significantly by unforeseen circumstances.

Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option. The Scheme would invest in the securities which are not listed but offer attractive yields. This may however increase the risk of the portfolio.

Re-investment Risk

This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.

Risks associated with investing in Derivatives

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

Risks associated with Securitised Debt

Risk associated with investing in securitised debt involve interest rate risk, prepayment risk, credit or default risks. Further, Asset Backed Security has structure risk due to a unique characteristic known as early amortization or early payout risk.

Risks associated with Securities Lending

- For Equity Instruments:** As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Fund will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/ issuer.
- For Debt Instruments:** As with other modes of extensions of credit, there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Risks associated with Short Selling

The Scheme may enter into short selling transactions, subject to SEBI and RBI Regulations. Short positions carry the risk of losing money and these losses may grow unlimited theoretically if the price of the stock increases without any limit. This may result in major loss to the Scheme. At times, the participants may not be able to cover their short positions, if the price increases substantially. If numbers of short sellers try to cover their position simultaneously, it may lead to disorderly trading in the stock and thereby can briskly escalate the price even further making it difficult or impossible to liquidate short position quickly at reasonable prices. In additions, short selling also carries the risk of inability to borrow the security by the participants thereby requiring the participants to purchase the securities sold short to cover the position even at unreasonable prices.

Risks related to arbitrage strategy (Applicable only to Invesco India Equity Savings Fund)

The Scheme seeks to exploit price discrepancies in various markets. Identification and exploitation of the strategies to be pursued by the Fund Manager involve uncertainty. No assurance can be given that Fund Manager will be able to locate investment opportunities or to correctly exploit price discrepancies in the capital markets. Reduction in differential pricing opportunities between the cash market and future and options market may lead to lower level of activity affecting the returns. As the Scheme proposes to allocate a part of its assets to execute arbitrage transactions in various markets simultaneously, this may result in high portfolio turnover and consequently high transaction cost.

Further, in case of a large redemption, the Scheme may need to reverse the spot-futures transaction before the date of futures' settlement. While reversing the spot-futures transaction on the Futures & Options settlement day on the Exchange, there could be a risk of volume-weighted-average-price of the market being different from the price at which the actual reversal is processed. This may result in basis risk. On the date of expiry, when the arbitrage is to be unwound, it is not necessary for the stock price and its future contract to coincide. There could be a discrepancy in their prices and there is a possibility that the arbitrage strategy gets unwound at different prices.

Requirement of minimum investors in the Scheme

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Risks associated with Investment in Gold/Silver Exchange Traded Funds

(Applicable only for Invesco India Multi-Asset Allocation Fund)

Investment in Gold/Silver ETFs involves investment risks such as Gold/Silver price movement, regulatory risk, trading volumes, settlement risk, liquidity risk. As the price / value of the underlying in which the Gold/Silver ETF invests fluctuates, the value of units of ETF may go up or down. The value of underlying of the Gold/Silver ETF may be affected, inter-alia, by changes in the Gold/Silver prices, changes in government duties, trading volumes, settlement periods and transfer procedures.

Currency Risk: The NAV of Gold/Silver ETF is based on the imported (landed) value of the Gold / Silver, which is computed by multiplying international market price by US Dollar value. Hence the value of NAV of Gold / Silver ETF will depend upon the conversion value and as such is sensitive to currency risk.

Liquidity Risk: Trading in units of Gold ETFs / Silver ETFs on stock exchange(s) may be halted because of market conditions or for reasons that in view of Exchange authorities or SEBI, trading in units of Gold ETFs / Silver ETFs is not advisable. In addition, trading in units of Gold ETFs / Silver ETFs is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI 'circuit filter' rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of units of Gold ETFs / Silver ETFs will continue to be met or will remain unchanged.

Regulatory Risk: Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Authorised Participant / Large Investor to arbitrage resulting into wider premium/ discount to NAV.

Risk Factors related to Purchase / Sale of units of Gold ETFs & Silver ETFs directly with the AMC/Mutual Fund: The Scheme can purchase / redeem (sale) units of Gold ETFs & Silver ETFs directly with the AMC/Mutual Fund only for transaction above a specified threshold. Currently, order for purchase / redemption of units of Gold ETF & Silver ETF directly with AMC / Fund must be for amount greater than Rs.25 Crores. Transactions for purchase of units of Gold ETFs & Silver ETFs for amount less than Rs. 25 Crores can be executed only on stock exchange(s) where these units are listed. This may result in a higher cost of acquisition due to variance in the price quoted on the stock exchange(s) and the underlying NAV of respective ETFs. Similarly, transactions for sale (redemption) of units of Gold ETFs & Silver ETFs for amount less than Rs. 25 Crores can be executed only on stock exchange(s) where these units are listed. The market price of Gold ETFs & Silver ETFs on stock exchange(s) may be at discount to NAV of respective ETFs thereby affecting returns of the Scheme. The ability of Scheme to purchase / sale units of Gold ETFs & Silver ETFs on stock exchange(s) will depend on overall trading volumes, liquidity (i.e. demand / supply) and bid/ask spread. In certain cases, settlement periods may be extended significantly by unforeseen circumstances.

Tracking Error Risk: The underlying ETF manager may not be able to invest the entire corpus in the same proportion as in the underlying index due to various factors such as fees, expenses of the scheme, corporate action, cash balance, changes in underlying index and regulatory policies which may affect the scheme's ability to achieve close correlation with the underlying index. Tracking error may be accounted by the various reasons which includes expenses, cash balance to meet redemptions, payout of IDCW, time to reallocate the portfolio subsequent to changes in the underlying index etc.

Further, the prices of Gold/Silver ETFs are impacted by the price of underlying Gold / Silver. Some of the key factors affecting Gold / Silver prices are as follows:

- Demand and Supply of Gold/Silver: Central banks across the world hold a part of their reserves in gold/silver. The quantum of their demand / selling in the market is one of the major determinants of gold / silver prices. Demand for gold / silver is also closely tied to the demand from consumers for jewellery, customary practices as well as seasonal events like weddings, festivals, etc. On the supply side, production of gold/silver by mining companies impacts the prices of gold/silver. Mining companies bringing new mines on-line is a time consuming and economically challenging process and may impact the supply of gold/silver.
- Macro-economic factors: Movement in US dollar, inflation, interest rates impact the prices of gold / silver. Rising US dollar, rising global interest rates and/or deflationary global environment can have a negative impact on gold/silver prices.
- Geo-political factors: Any uncertainty in global or domestic geo-political front or any war-like situations helps gold/silver prices due to uncertainty premium.
- Change in duties & levies: Gold/silver prices include any duties and levies imposed by the governments. Any change in duties and levies will impact the price of gold/silver.

Risks associated with investing in ADR/GDR and Foreign Securities

Applicable only for Invesco India Largecap Fund, Invesco India Smallcap Fund, Invesco India PSU Equity Fund, Invesco India Focused Fund, Invesco India ESG Integration Strategy Fund, Invesco India Aggressive Hybrid Fund and Invesco India Equity Savings Fund

To the extent the assets of the Scheme are invested in overseas financial asset, there may be risk associated with fluctuation in foreign exchange rates, restriction on repatriation of capital and earnings under the exchange control regulations and transaction procedure in overseas market. Investment in foreign securities carries currency risk. The exchange risk associated with a foreign denominated instrument is a key element in foreign investment.

Additional risks associated with the CE rated papers

Applicable to all Schemes except Invesco India ELSS Tax Saver Fund

In addition to all the risks associated with the plain vanilla instruments like NCDs / Money market instruments etc., any instrument rated with the suffix (CE) is exposed to various additional risks on the basis of the explicit underlying Credit enhancement (CE) from a third party/ parent/group company, in the form of corporate guarantee/ letter of comfort/ pledge of shares etc. The risk involved are:

- If the Credit Enhancement is in the form of Corporate Guarantee / Letter of Comfort, then there is a legal risk of enforcing the Corporate Guarantee / Letter of Comfort along with the credit risk pertaining to the Credit Enhancement provider.
- If the Credit Enhancement is in the form of pledge of shares, then the additional risks are those associated with equity price movement, share collateral cover, liquidity of shares pledged as collateral in the secondary market, availability of free shares with the CE provider to be provided as additional collateral. Further there is also a legal risk of enforcing the pledge of shares, operational risk in selling the shares in secondary market & the underlying impact cost.
- If the Credit Enhancement is in any other form, then there is a risk pertaining to legal enforceability of the credit enhancement and credit risk of the credit enhancement provider.

Risk Factors Associated with repo transaction in Corporate Debt Securities:

Applicable only to Invesco India Focused Fund and Invesco India ESG Integration Strategy Fund

Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. Fund Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis and / or with entities regulated by SEBI/RBI/IRDA. In the event of default by the repo counterparty, the Scheme will have recourse to the corporate debt securities given as collateral to recover the investment by selling the collateral in the market.

However, selling of collateral will also be subject to liquidity risk in the market and the Scheme may incur impact cost at the time of selling the collateral.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations or there is downward migration in rating of collateral. Further if the rating of collateral goes below the minimum required rating during the term of repo or collateral becomes ineligible for any reason, counterparty will be expected to substitute the collateral. In case of failure to do so, IAMI / Schemes of the Fund will explore the option for early termination of the trade.

Risk Factors associated with investments in REITs and InvITs

Applicable only to Invesco India Focused Fund and Invesco India ESG Integration Strategy Fund

- **Market Risk :** REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.
- **Liquidity Risk:** As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk.
- **Reinvestment Risk:** Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

Risks associated with segregated portfolio

Applicable only to Invesco India Focused Fund and Invesco India ESG Integration Strategy Fund

- Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Security(ies) held in segregated portfolio may not realize any value.
- Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

However, expenses that are very small in value but high in volume may be paid out of AMC's books at actuals or not exceeding 2 bps of scheme AUM, whichever is lower. A list of such miscellaneous expenses will be as provided by AMFI in consultation with SEBI.

For payment of Agents Commission, MF / AMC has adopted full trail model of commission without payment of any upfront commission or upfronting of any trail commission, directly or indirectly, in cash or kind, through sponsorships, or any other route. However, upfronting of trail commission will be allowed for inflows through Systematic Investment Plans (SIPs) from new investors, up to 1% payable yearly in advance, for a maximum period of three years subject to guidelines provided by SEBI, as amended from time to time. The upfront trail commission shall be paid from the books of the AMC and amortized on daily basis to the scheme over the period for which the payment has been made.
